

Forests are 50-50 green and yellow. Bright yellowish & red colors, on water level. Marsh hawk and sparrow hawk at S end dam.

Clinton, Lone Star Lake, Douglas Co., Kansas  
Oct. 15, 1978

From S end Clinton Dam observed 37 pelican all in first row of emergent vegetation w side lake. Usual number cormorant and ducks (see Oct. 14 1978). 40 Franklin gulls, redtail, 30 ring-billed gulls. Continued to Lone Star Lake and took photo 781015-1 from camping area to NW bay. Continued to Clinton, thence E to Bloomington marina. From just W of marina took the following photographs: (see map below).

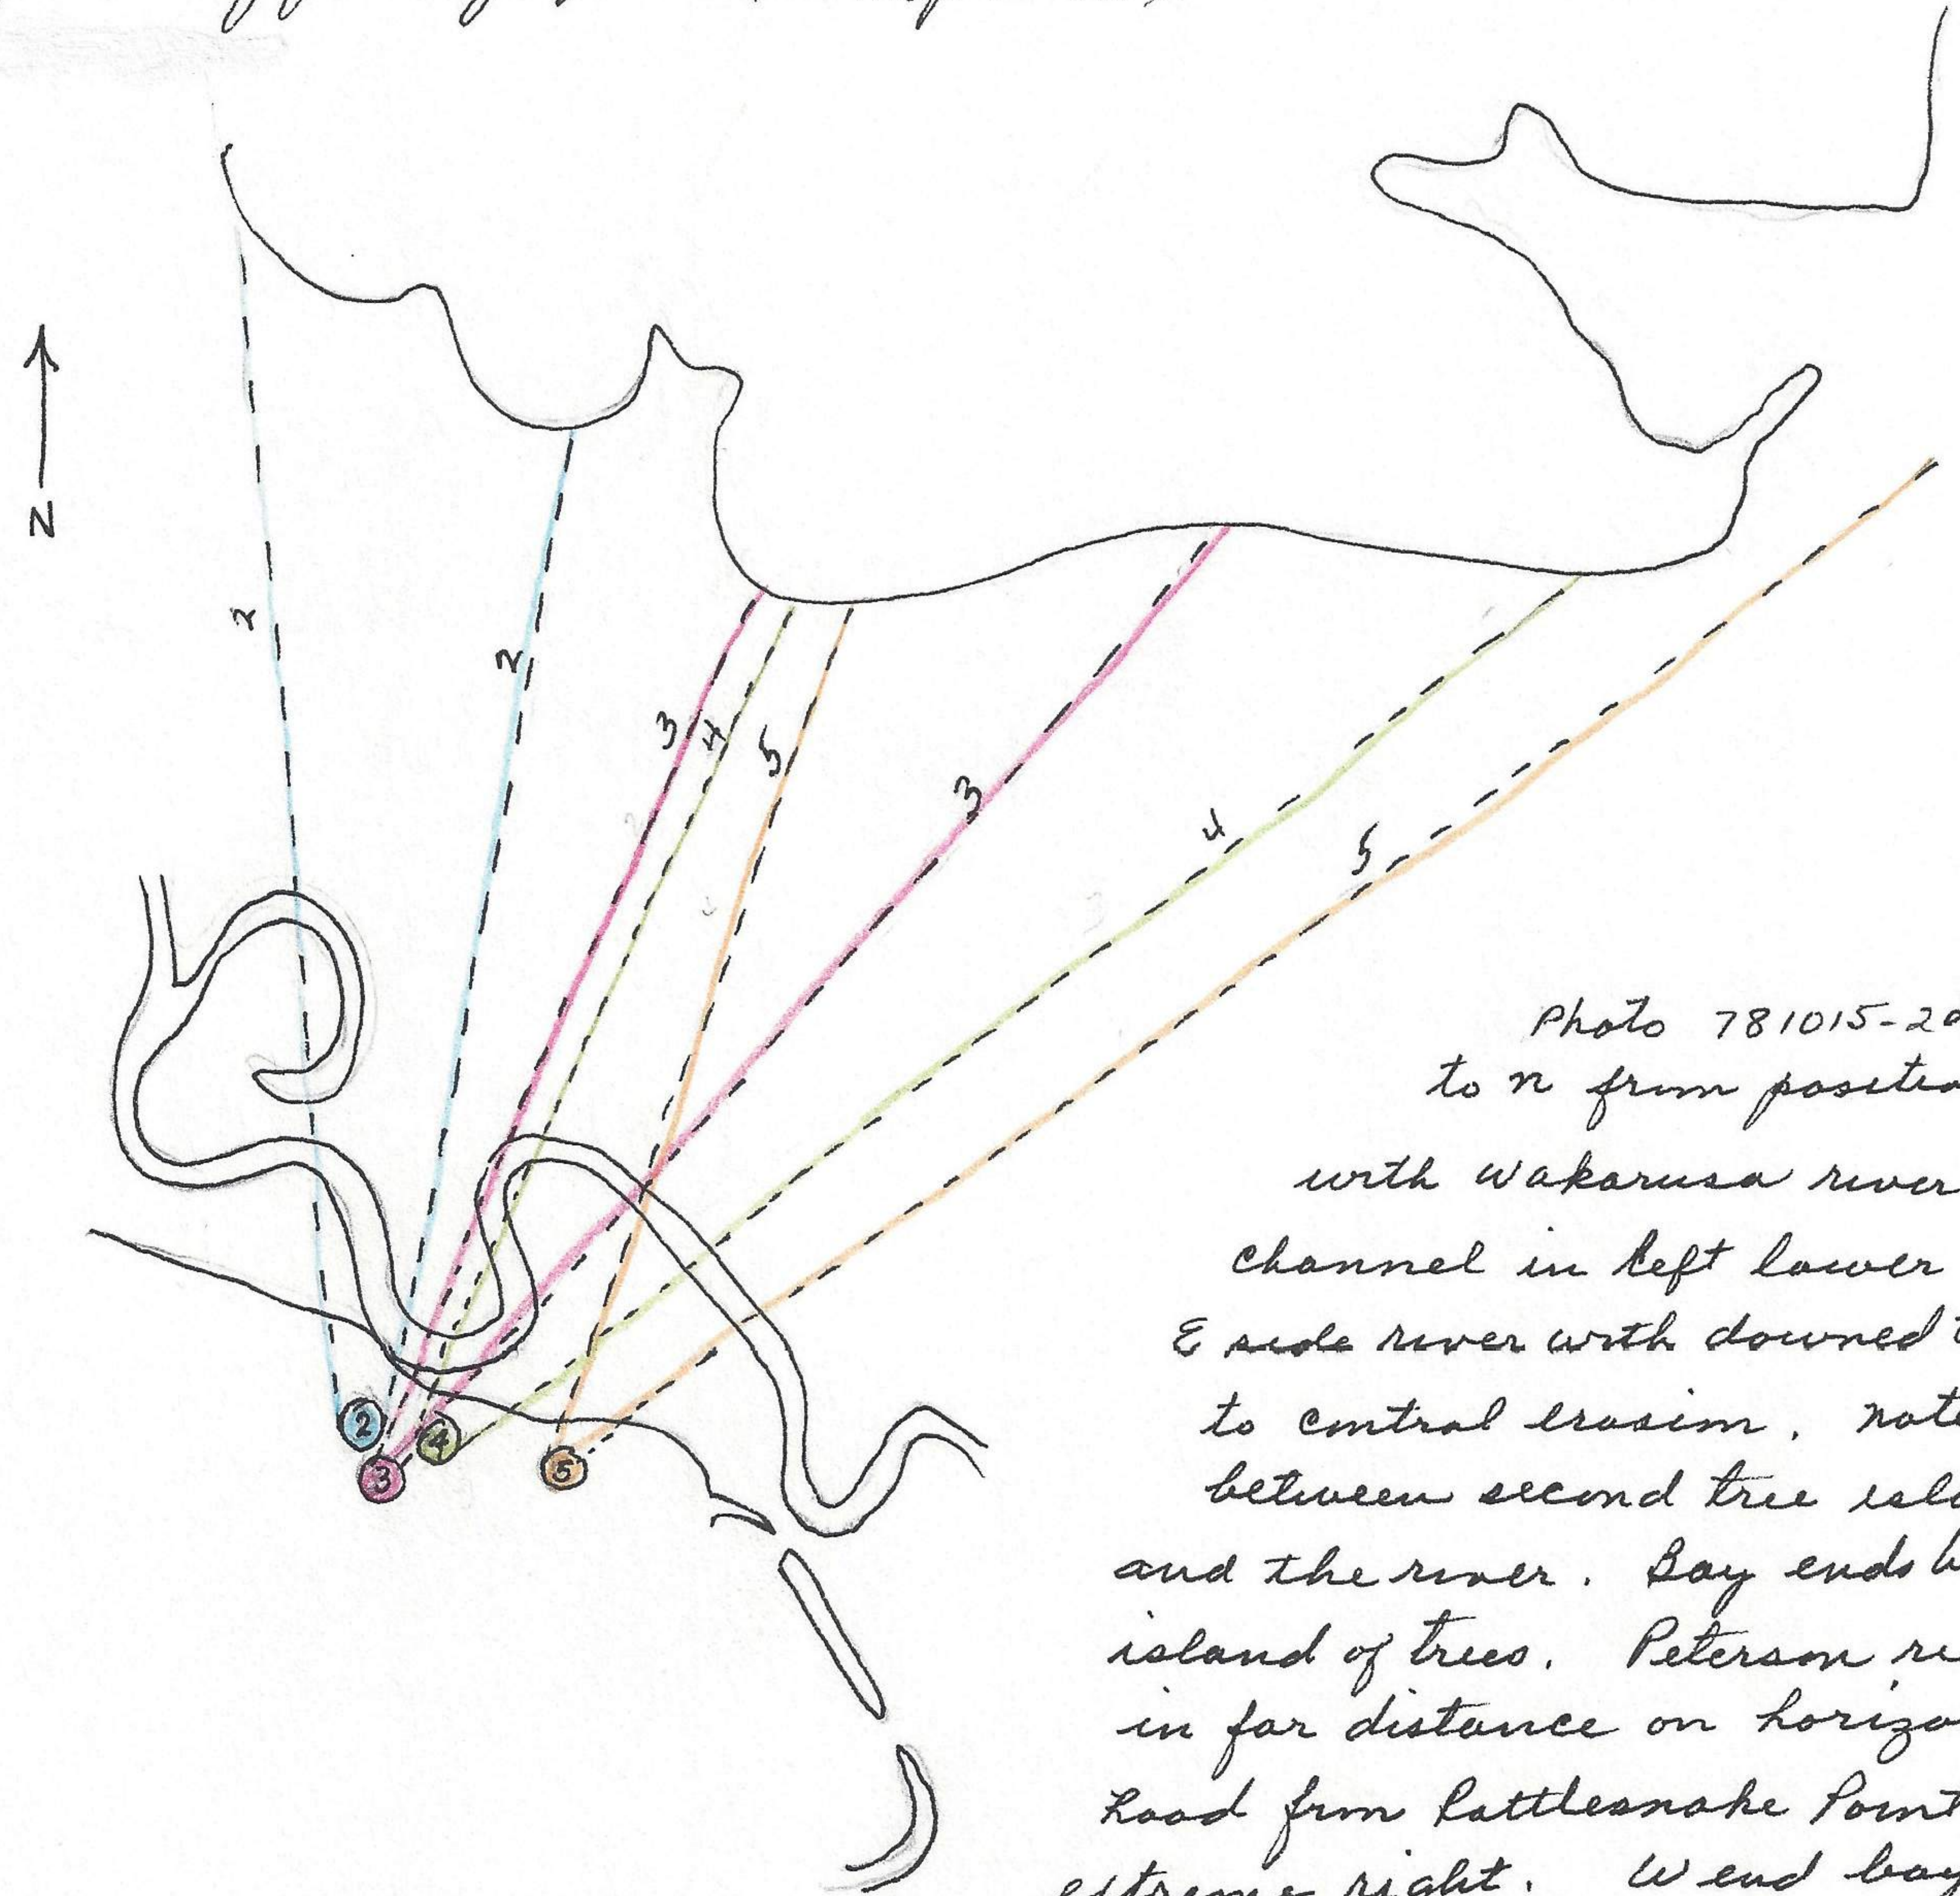

Photo 781015-2 directly to N from position ② with Wakarusa river channel in left lower corner E side river with downed trees to central erosion, note canal between second tree island and the river. Bay ends beyond island of trees. Peterson ridge in far distance on horizon. Road from Lattlesnake Point on extreme right. W end bay

bordered by old weeds landward and aquatic vegetation lakeward. A raccoon had just walked across first vegetation reef beyond river to N, and gained wall of down timber. Also Wilson snipe in same area. all riparian forests have been cut between here & dam.
