|--|--|--|--|

Dense line on E side. 3:45 crossing natural Wall Canyon? 3:52 Erratic canyon now to top. 4:04 top at boulder. 408 car. Summation  $3\frac{1}{10}$  mi to turnaround and 3 mi back or ~~6~~  $6.2/10$  miles for entire trip. It is unusual that I did not see either the fox squirrel or gray squirrel on entire trip although degrenge were present along the way. Some wild onions in forest but nothing compared to numbers in riparian forests along the Kaw River. Birds observed on first half of trip (turnaround) red-headed woodpeckers - 30 of which 4 were singles and 1 of 3. It is obvious that these birds are paired. On return trip noted 31 which may or not represent repeats.

robin 1-2 = 3

bluejays 5 pairs, 1 single or = 11

mallards 2-8 = 10

woodducks 2-3 = 5

cardinals 2-1 = 3

woodcock 1

rufous sided towhee 2

cormorant 9

golden eye 2

cattail 1

downy 2-1 = 3

crow 3

g-w teal on return noted 4 g-w teal flying N overhead.

redtail 1-1-1 = 3

Clinton Reservoir, Douglas Co., Kansas

April 5, 1979

Left car at S end dam at 9:22 A.M. 6 cormorants from E of dam flew over dam & continued up Rush Creek. 5 gulls along dam. Wind from WSW producing good white-caps. Slope of dam at SE end west side good microtine runways. Arrived lake shore directly below at 9:24. 9:27 first point, soils along shore wet and many good *Scirpus* trails. Small sparrow sp.? 9:32 point and small pond, frogs, approx 30 trees around pond & in drainage. up to 25' high. 9:35 drainage <sup>+ lake level water</sup> at road crossing 200' from lake proper. Water clear and 1 gal per 6 sec. 9:45 2 redtails in valley to SW. 1 crow, at first drainage bay 8 coot and 3 cormorants left and flew out into lake but returned by swimming. Lava pipes at head.
