number 800801-1 duplicates 800801-1 *Eutamias*. The Sorex was transferred to 800801-4 which may or may not be occupied by another Sorex. Check skull number of 800801-1. Number 800801-9 *Eutamias* above is an old adult female. The reproductive system was small and there was no mammary gland material between the epidermis and the muscle. Hair surrounded the nipples.

The above Sorex was taken from 10 traps set among willow. Soils damp to wet and ground cover. The rest of the 40 traps were set among ^{large granite} rocks in Ponderosa, Lumber pine association but fairly open.

This afternoon at 3:00 P.M. placed 40 traps under overhang portions of granite rocks and boulders in what I judged to be good areas for *Eutamias minimus* in the afternoon and *Peromyscus* at night. The placements thus: (all traps protected from rain. At 6:30 P.M. checked trapline and collected two *Eutamias*:

<u>800801-24</u>	<i>Eutamias minimus</i>	192-82-31-15-47 gm ♂ testis 6 mm
minely <u>800801-25</u>	" "	192-87-31-15-46 gm ♀ ut. normal
