

at 8:00 A.M. California quail flew up lakes. This single night camp at almost 11,000 ft was to test the effect of altitude on recent double coronary bypass. There was no adverse effect in fact I seemed to operate at high altitudes better than low altitudes, no dizziness, fatigue or increased pressure in heart area.

Sheep had been in area recently and wherever they had open gopher corridors, the gophers had closed them with soil. Left camp <sup>9:50 A.M.</sup> and temporarily set up on S shore of Mirror Lake where I prepared the mammals captured last night. Gray-headed junco <sup>and white-crowned sparrows</sup> here. From this place took 12 photos of the range to W and immediate environs.

- 800804-18 chimney on face of Snowy Range W of lake. (Mirror)
- 800804-19 face Snowy Range E side W of Mirror Lake showing dikes.
- 800804-20 main prominent cliff on Snowy Range W of Mirror Lake
- 800804-21 ibid but just S with main peak to left.
- 800804-22 upper reaches of main cliff W Mirror Lake
- 800804-23 Mirror Lakes and peaks to W on Snowy Range.
- 800804-24 ibid.
- 800804-25 ibid
- 800804-26 ibid
- 800804-27 ibid
- 800804-28 ibid
- 800804-29 ibid, trailer and Annette to left.
- 800804-30 Mirror Lake and Range.
- 800804-30a Snowy Range from Mirror Lake.

Today the wind was more moderate and blew across the lake from the SW, occasionally it would blow from the south. On way over from Libby camp, noted 8 *Citellus richardsonii* on Libby Flats, 10 more on other side of divide oblong the road descending to lake area to W. Three Cassin's purple finch were also noted on Libby Flats, also 3 raven. From pass on Libby Flats took six photos (35mm) of Snowy Range with different magnifications.
