

PRAIRIE DOG COMMUNITY, SEC 2 AND 11, R78W, T32N,
NATRONA CO. WYO

The vegetation is typical spring fed growth. These same springs would have offered the Indians a source of water near their caves. Birds in area are white-throated swifts, Steller jay. Returned to car via ridge on south side of creek. From this ridge took photo 800811-4 of canyon showing better the covers in red strata on N side of canyon. Returned to car at 1:00 P.M. Photo here. Return to main highway and from point indicated on above map counted antelope in cultivated river valley N of Hat Six Ranch to highway. There were 159 generally distributed. 8 ran across road from E to W. In an alfalfa field about half way from here to interstate highway counted 17 antelope, all in the cultivated field,
