

4 semipalmated sandpipers
 8 great blue herons
 1 common egret
 1 immature little blue heron
 40 gadwals
 20 bluewing teal
 2 adult, 4 imm. black tern

8 goldfinches
 1 mourning dove
 2 turkey vultures.

Under a 3/4 inch board on sand was a group of 7 small toads (1" to 1 3/4") in moist sand (from excretion) in compact arrangement.

A mole had dug an intermittent corridor 200' from vegetation across absolutely bare sands to edge of water. It ran not shore which direction it had travelled. It travelled in a fairly direct line. If it went to water it must have returned same route or over sand or continued across the river.

A great blue heron dropped ^{white} excrement on sands and trailed for 12' as a solid line.

James Robert Bee told me that swallows fed on insects on the side of a building near a light during middle of day. I have also observed purple martens feeding on insects on upper parts of telephone or light poles that had lights burning during the night.

Lake View, Kansas

Aug. 27, 1980

Birds at lake: 6 Killdeer, solitary sandpiper, 2 sanderlings, family group 5 Eastern Kingbirds, 3 great blue heron eating blue sunfish, 3-4 inches long. Lotus in blossom at N end lake. Sand dredging full operation.
