

Reservoir  
Leavenworth - Perry, Douglas - Jefferson Cos., Kansas

Dec. 6, 1980

Checked eagles at Leavenworth-Perry Reservoir. Left Lawrence 12:00 A.M., Temp. 40, sky temporarily clearing, strong wind from NW, mileage 28154. Will record selective observations. Sparrow hawk at Kasalid and Lake View Road (Farmers Turnpike), marsh hawk at turnoff road to Lake View. Turn N on first road W Bruner and followed to river (at river  $\frac{1}{10}$  mi. NE dike). One immature bald eagle with impure white in head and tail (dark white with other streaks of black) and an adult bald eagle. The adult was in tree on N side of river NW. The immature on sand in river bed, continued or returned to main road and at N end of Lake View observed a sparrow hawk. 1 mi beyond along road another sparrow hawk. At 1 mi. E of mouth of Oakley Cr noted immature bald eagle flying down river at tree top height. From S end of Leavenworth bridge 1 adult bald eagle on ice in river bed off Kew, 1 immature flying near adult above and one adult bald eagle in tree  $2\frac{1}{2}$  mi. W mouth of Delaware River in tree on north side, at Perry dam at outlet water at 889.8 feet, water one foot (toward dam) from base of gates. No ducks in river below but 13,000 male and female mallards in reservoir W of outlet, (12:45 P.M.)

Continued N along W side of road and at a point in a bay area south of the Jefferson Point - Rock Creek contact observed the mating habits of Sciurus niger (fox squirrel) (see map below).

Approx 18 fox squirrels were first observed in an area of  $25 \times 25'$  bordering the main road. The entire area seemed to be moving with these squirrels, some groups 2-4 clasping each other up tree, thru the bushes, on the ground, over rocky terrain, along shoulder of road. There were temporary contacts on tree trunks or on the ground but activity was mainly the act of chasing each other. This was mating behavior and continued uninterrupted for 2 minutes while we watch from car on edge of road not over
