

Little Chalet, mt. Timpanogas, Sundance, Utah.

Checked arrival of birds from daybreak at the chalet
 Temp 30°F. NO wind
 feeding area. 5:48 Steller jays; 6:05 slate-colored
 juncos; 6:12 robin; 6:18 black capped chickadee. Sun
 up here at 6:18 A.M. 6:18 mt. chickadee; 6:27 Oregon
 junco and gray-headed junco. 6:34 red-breasted
 nuthatch. Then a lull. 6:45 Eutamias.

Drove to Provo. at Bridal Veil Falls in Provo Canyon
 took 2 photos of falls.

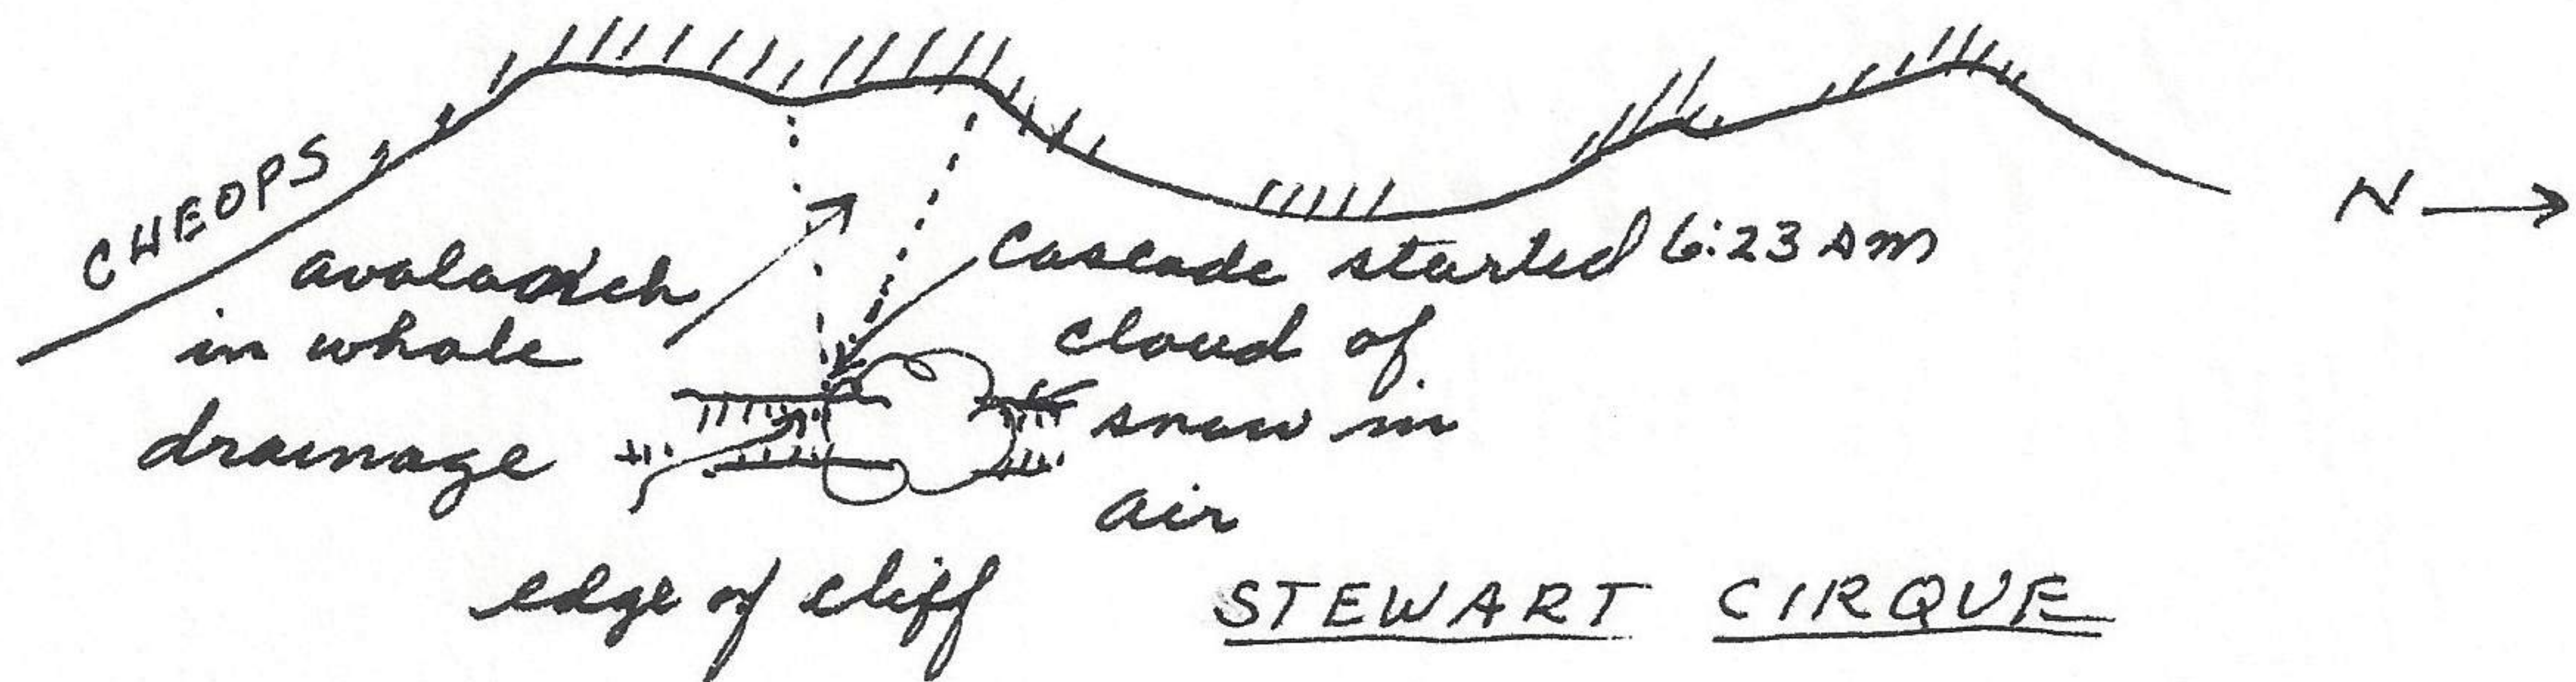

810408-1 upper falls of Bridal Veil. Form in Pennsylvanian
 or maybe mississippian rocks. Occasionally snow slides
 come over these falls to canyon below. These waters are part of
 Provo's culinary water supply.

810408-2 lower falls of Bridal Veil Falls. waterouzel have
 nested behind these falls near base.

moraine chalet, Sundance, mt. Timpanogas, Utah.

April 9, 1981

windy, Temp. 42°F. Sun on high clouds above Temp. many
 snow banners, gusty winds. 6:08 A.M. sun just arrived top
 ridge of cirque 6:23 avalanche from surface snows
 falling over edge of cliff but instead of a cascade, blows out
 into space and comes identically as an avalanche and is now a
 cloud in appearance.

6:45 A.M. Increased surface wind caused 2 or 3 dozen avalanches
 and cascades over cliffs for a period of 1 minute. These snows
 are surface snows moved by wind.

6:48 A.M. Best display of banners and snow still blows out into
 space as they drop out over edge of cliff.

7:02 A.M. Photo (telo) 810409-9 of cirque and ridge banners, cloud
 shadow on lower floor of cirque. The avalanche that started
 at 6:23 A.M. has been running continuously for the 39 minutes.
 It is now decreased in size and at the moment intermittent.
 The slides on cirque walls are weekly synchronized in time.
 This is drainage no 4 on map. Above 3rd knoll in snow field.
