

that is darker and with more moisture than surface sands.  
 These are placed in several positions from hole;   
 in back, in front or to the sides. I wonder  
 if they (the sands) are held together by some mucous material.  
 The ball completely fall apart if pressure is applied on them.

Noted a black skimmer pick up food from sands away  
 from water as it <sup>slowly</sup> moved across the sand.

Things people do on beaches and dunes:

run	observe birds
make noise	chase birds
fly kites	make sand castles
walk	feed gulls
jog	play ball
frisbee & dog	play badmitten
" " human
