

is held high and  a great area of white is exposed. This may be a way of receiving heat from the sun. Some σ^7 Common Goldeneye have no ^{white} crescent and those without have minimum amount of white in wing. ^{or faintly} Several females had a yellowish orange bill and greenish eyes instead of yellow. One female had dark eyes.

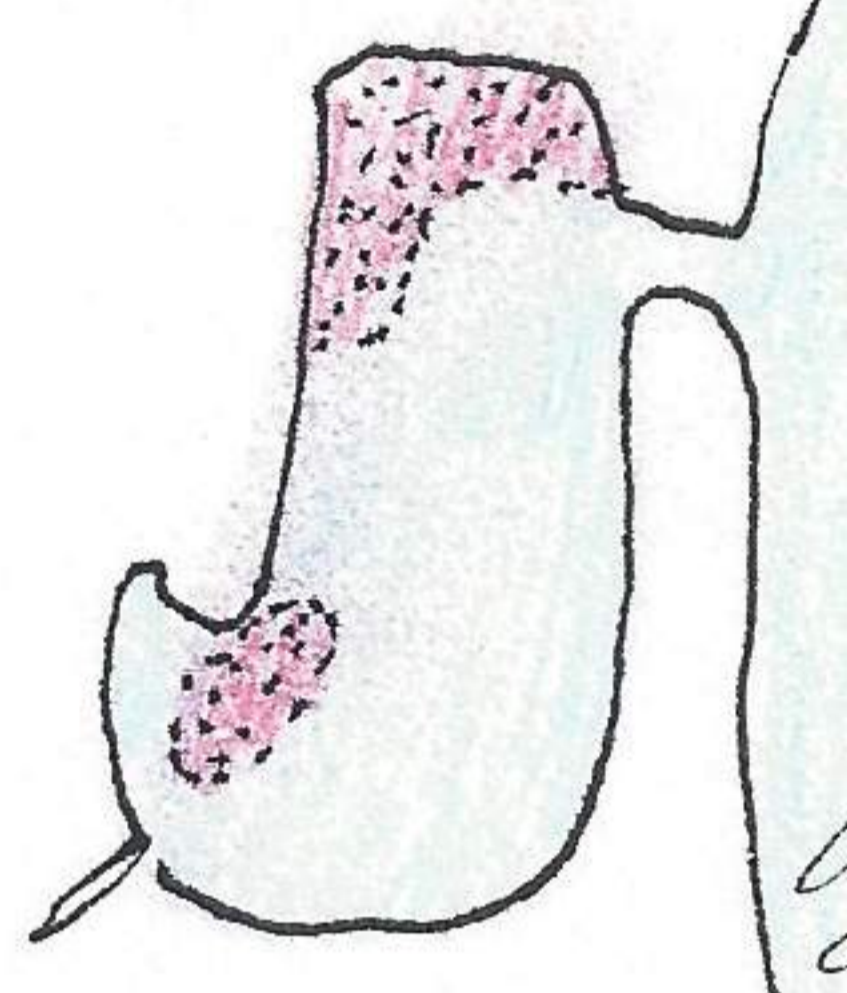

yellowish-orange

at 10:00 A.M. 5 swan (adults) circled by from N then flew into fog bank on lake to E.

By 10:30 fog cloud off lake and valley and sky absolutely clear. 8 Herring gulls. Water with almost microscopic algae or plankton out to at least 15' 8' out a greenish yellow mass in windrows (a jelly gelatinous like substance). Otherwise water clear.

Left 207.5 at marina harbour
 Informant said that some elk here might migrate to Jackson Hole. This year elk are staying high in mts and a deep snow will drive them down. Last winter keel hardly put a dent into the population and it will take two in a row to balance the population with the winter food supply. The trumpeter swan congregate in meadow drainage from junction to W. Yellowstone. Now they are moving into their winter area, from their general distribution now. Chipmunk active. 221.8 west thumb red squirrel. Will keep complete census. 213.1. Eutamias minimus road kill, 213.7 west thumb 215.9 Continental Divide. 219.7 Lewis Lake, no ducks. Small ponds frozen
 223.3 ^{4 Lewis River} Extensive fields of marsh grass and rice and willows cropped. Beaver pond, 232.3 Crawfish Cr. Willows normal size, 4-6' high. 236.4 Beaver dams & ice on ponds ⁴⁰ 234.4 beaver house. Willows have a variety of color, purple, yellow, ^{orange} green, red etc. 240.5 Grand Teton Nat. Park, Canada jay 240.8 Canada jay road kill. Lodgepole (young) growing along side of road scraggly & diseased. Good stands of aspen which we have not seen for some time. 244.1 West of Jackson Lake Photo 831030-3 and 831030-4 of S end of Teton. No birds on mud flats and about 200 in middle of hay to W. Redtail. 245.2 36,000 ducks 4/5 holdgate 4/5 redhead ducks. 400000000 and a few shovelers and maybe other species. 253.9 Co.

areas of feeding of horned grebe, Common Goldeneye, bufflehead, Loon & Coot (2)!
