

Sept. 7, 1988

9:00 A.M. male mule deer (31" high at shoulders) and antlers  
 5 1/2" high,  and no velvet. Its pelage pattern:  
 } side view

This ♂ came from benchland to NE of Bee House and returned same direction.

male mule deer 30" high at shoulders, antlers 6", no velvet,

There were 6 *Eutamias townsendi townsendi* feeding on ground beneath deer. At one time a chipmunk entered feeding box and both deer and chipmunk fed 3-4" apart (from mouth of deer).
