

Jan 30, 1989

8:45 A.M. 45 American Crows at Bee feeder.

1:30 P.M. 23 great blue heron in tops of conifer trees (Douglas fir) at Humphrey Head marina

I have observed this aggregate of herons in the same groups of trees on previous occasions. Cars pass by on road and the herons do not leave but when one walked by they leave the area and on this occasion they flew out into Shoal Bay, circled and returned.

3 bald eagles today.

Day windy, cloudy, rain and no seals used Leo Keef today.

Jan 31, 1989

In the 'Bee Boat', max temp last week 70°F, min 33°F. The cold, windy, nor-eastern started during the night (Jan 31, Feb 1) In fact we called 3:30 AM to Opalco ^(Feb 1, 1989) that power was off in our home.

Feb. 1, 1989

All day snow, wind 90 MPH, 14°F. All weather movement horizontal to shoreline, then up over top of Humphrey Head. Temp in house 33-44°F with wood stove full force. all fallen trees occurred during the storm and well as telephone service. Recorded several photos from Bee House of shoreline S of Spring Cove and taken during non gust periods when shoreline was visible. sometimes visibility 5'!

- 890201-1 From Bee House to S along shoreline. Snow, spray horizontal

Feb. 2, 1989

From section of red cedar at approx 38 feet from base for cyclic interpretation. This specimen is no. 890202-1 I would estimate there were 150 trees downed by the storm on Humphrey Head. (See photos 890202-13) 12' Circumference at chest high. of above cedar tree 890202-1

Day partly clear, windy. Temp 14-18°F. Waves at 9:00 AM 12-18 per minute. all snow and spray horizontal past house. Between Early morning and 11:00 A.M took several shoreline photos:
