

shoreline of Spring Cove Point and continued up thru the forest. The ankle gland was persistently cleaned but did not show color change.

May 12, 1989

5:48 A.M. Bald eagle flew S past Bee House at approx 75' high. a harbor seal active 1/10 mi. E Bee House.  
Sun up 5:55 A.M.

6:03 A.M. approx 20 fish 8" long surfacing 150' S<sup>E</sup> of Bee House and moved progressively SE.

6:06 A.M. band-tailed pigeons at feeder and first ones of the day.

6:07 A.M. violet-green swallows active.

6:11 A.M. Western grebe active half way to Leo Reef. 2 American crows arrived.

6:15 2 more western grebes. They travel on water in Sound almost continuously and cover great distances. 1 great blue heron.

when pigeon guillemots leave they produce a rushing noise that might be an adaption to confuse predators.

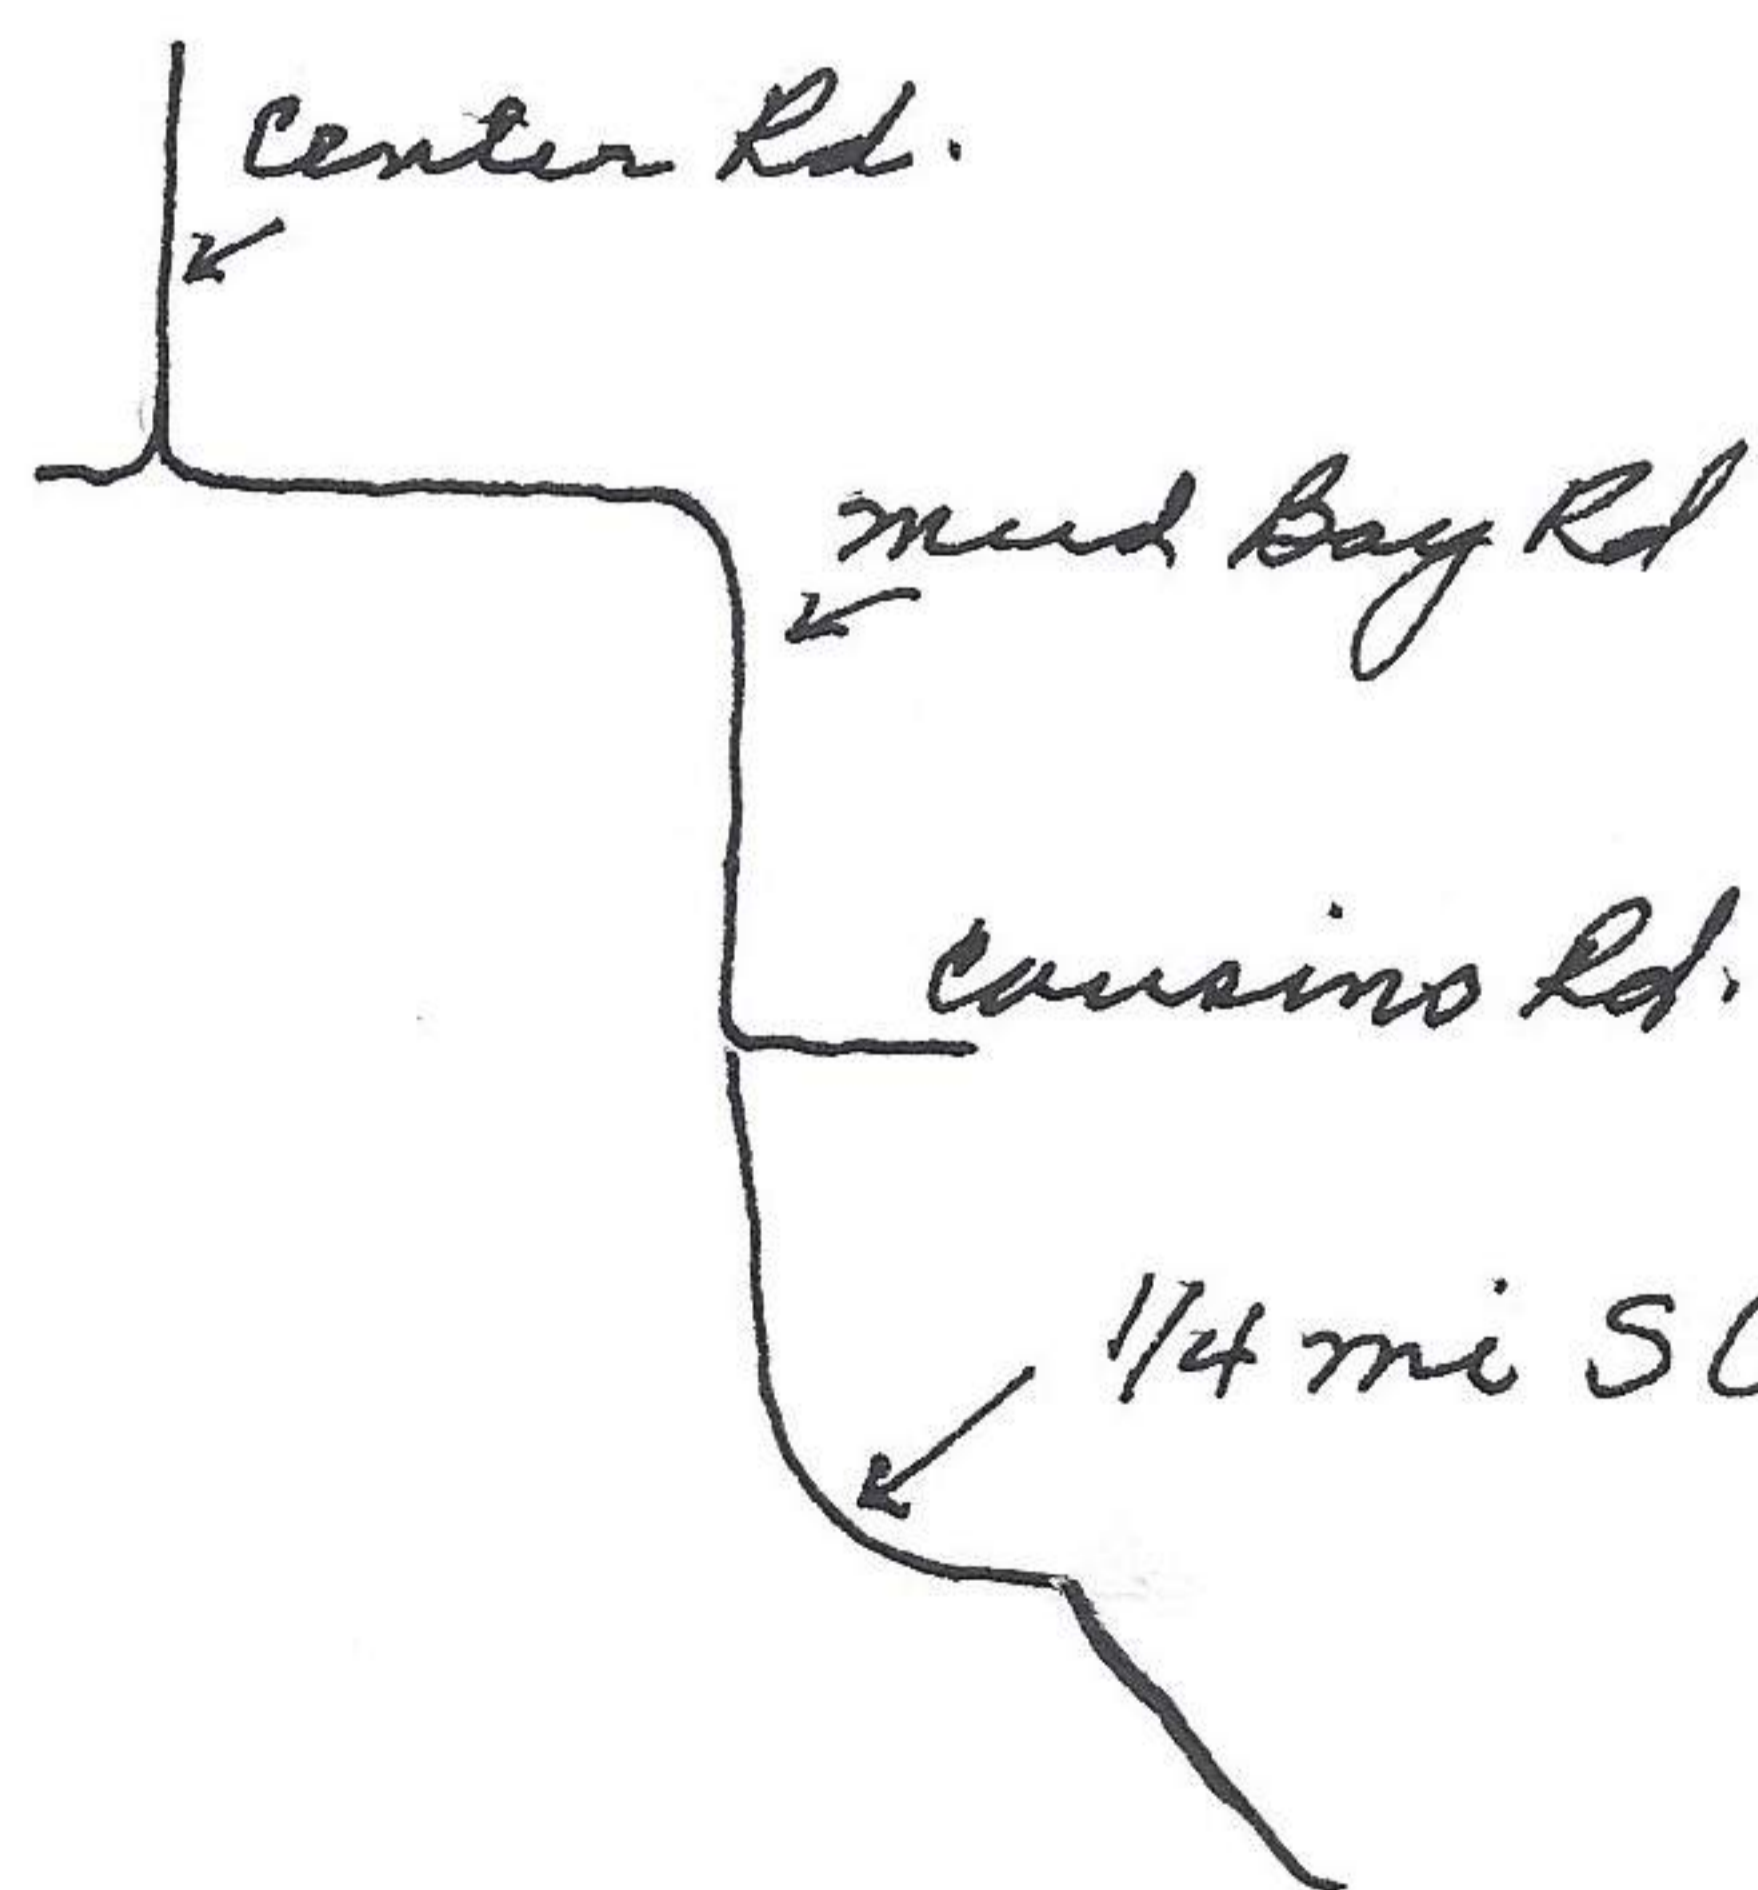

Rufous hummingbird concerned about band-tailed pigeons coming within 3-4 inches but not making contact.

6:20 A.M. Great blue heron left Spring Cove and flew E to Blakey Island.

6:38 no harbor seal on Leo Reef.

6:39 38 glaucous-winged gulls on Leo Reef.

9:00 A.M. at 1/4 mi. S Cousins Road on Mud Bay Road

noted a juvenile mink along E side of road. It acted like a weasel and walked back and forth along edge of road, with attention directed off road. It finally moved off road onto right-of-way and thence into vegetation beyond. I wondered

if a member of the family might have been killed at this point. I could not find such evidence by searching area. I estimated total length as 13". Top of head with braided slip of hair as if injured at one time.
