

June 22, 1989

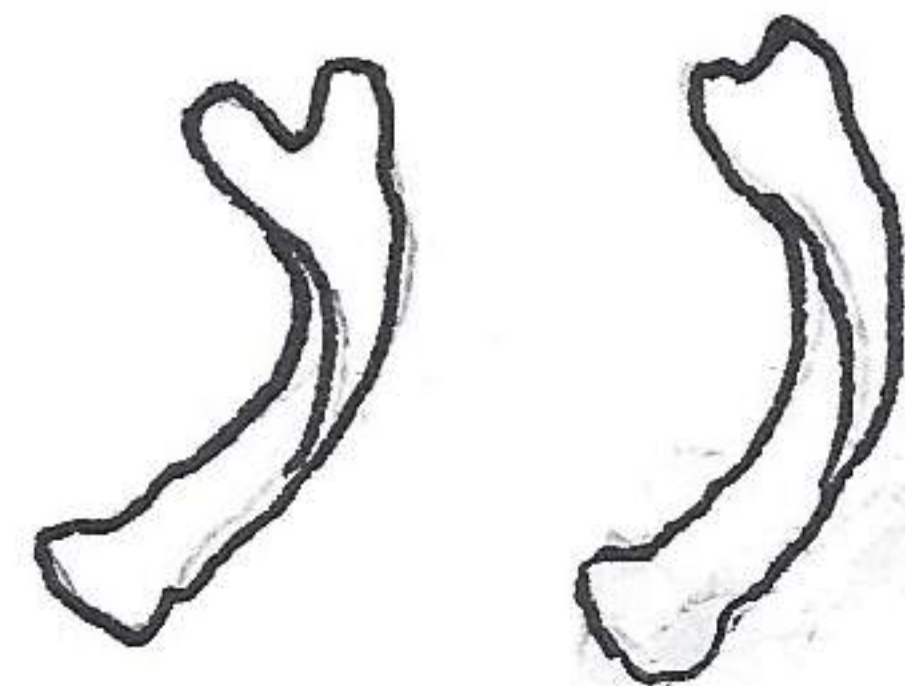

The eastern gray squirrel, Townsend Chipmunk and American crow have taken fresh water from the bird drinking pan.

Fawn of Buster, a mule deer, measured 20 1/2" high at shoulder. Second fawn measured 20" high at shoulders.

a mule deer measuring 32 1/2" high at shoulders had the following size and shape antlers.

8:35<sup>AM</sup> river otter pasted S in front Bee House.

LEFT RIGHT

5:30 - 6:00 P.M. at Sea Boat in Shoal Bay an asprey captured a 3" fish at S<sup>E</sup> end Shoal Bay. It flew E to Humphrey Head then N 2/10 mi. and alighted in a perching tree. I caught and released a dogfish 31" long (standard measurement).

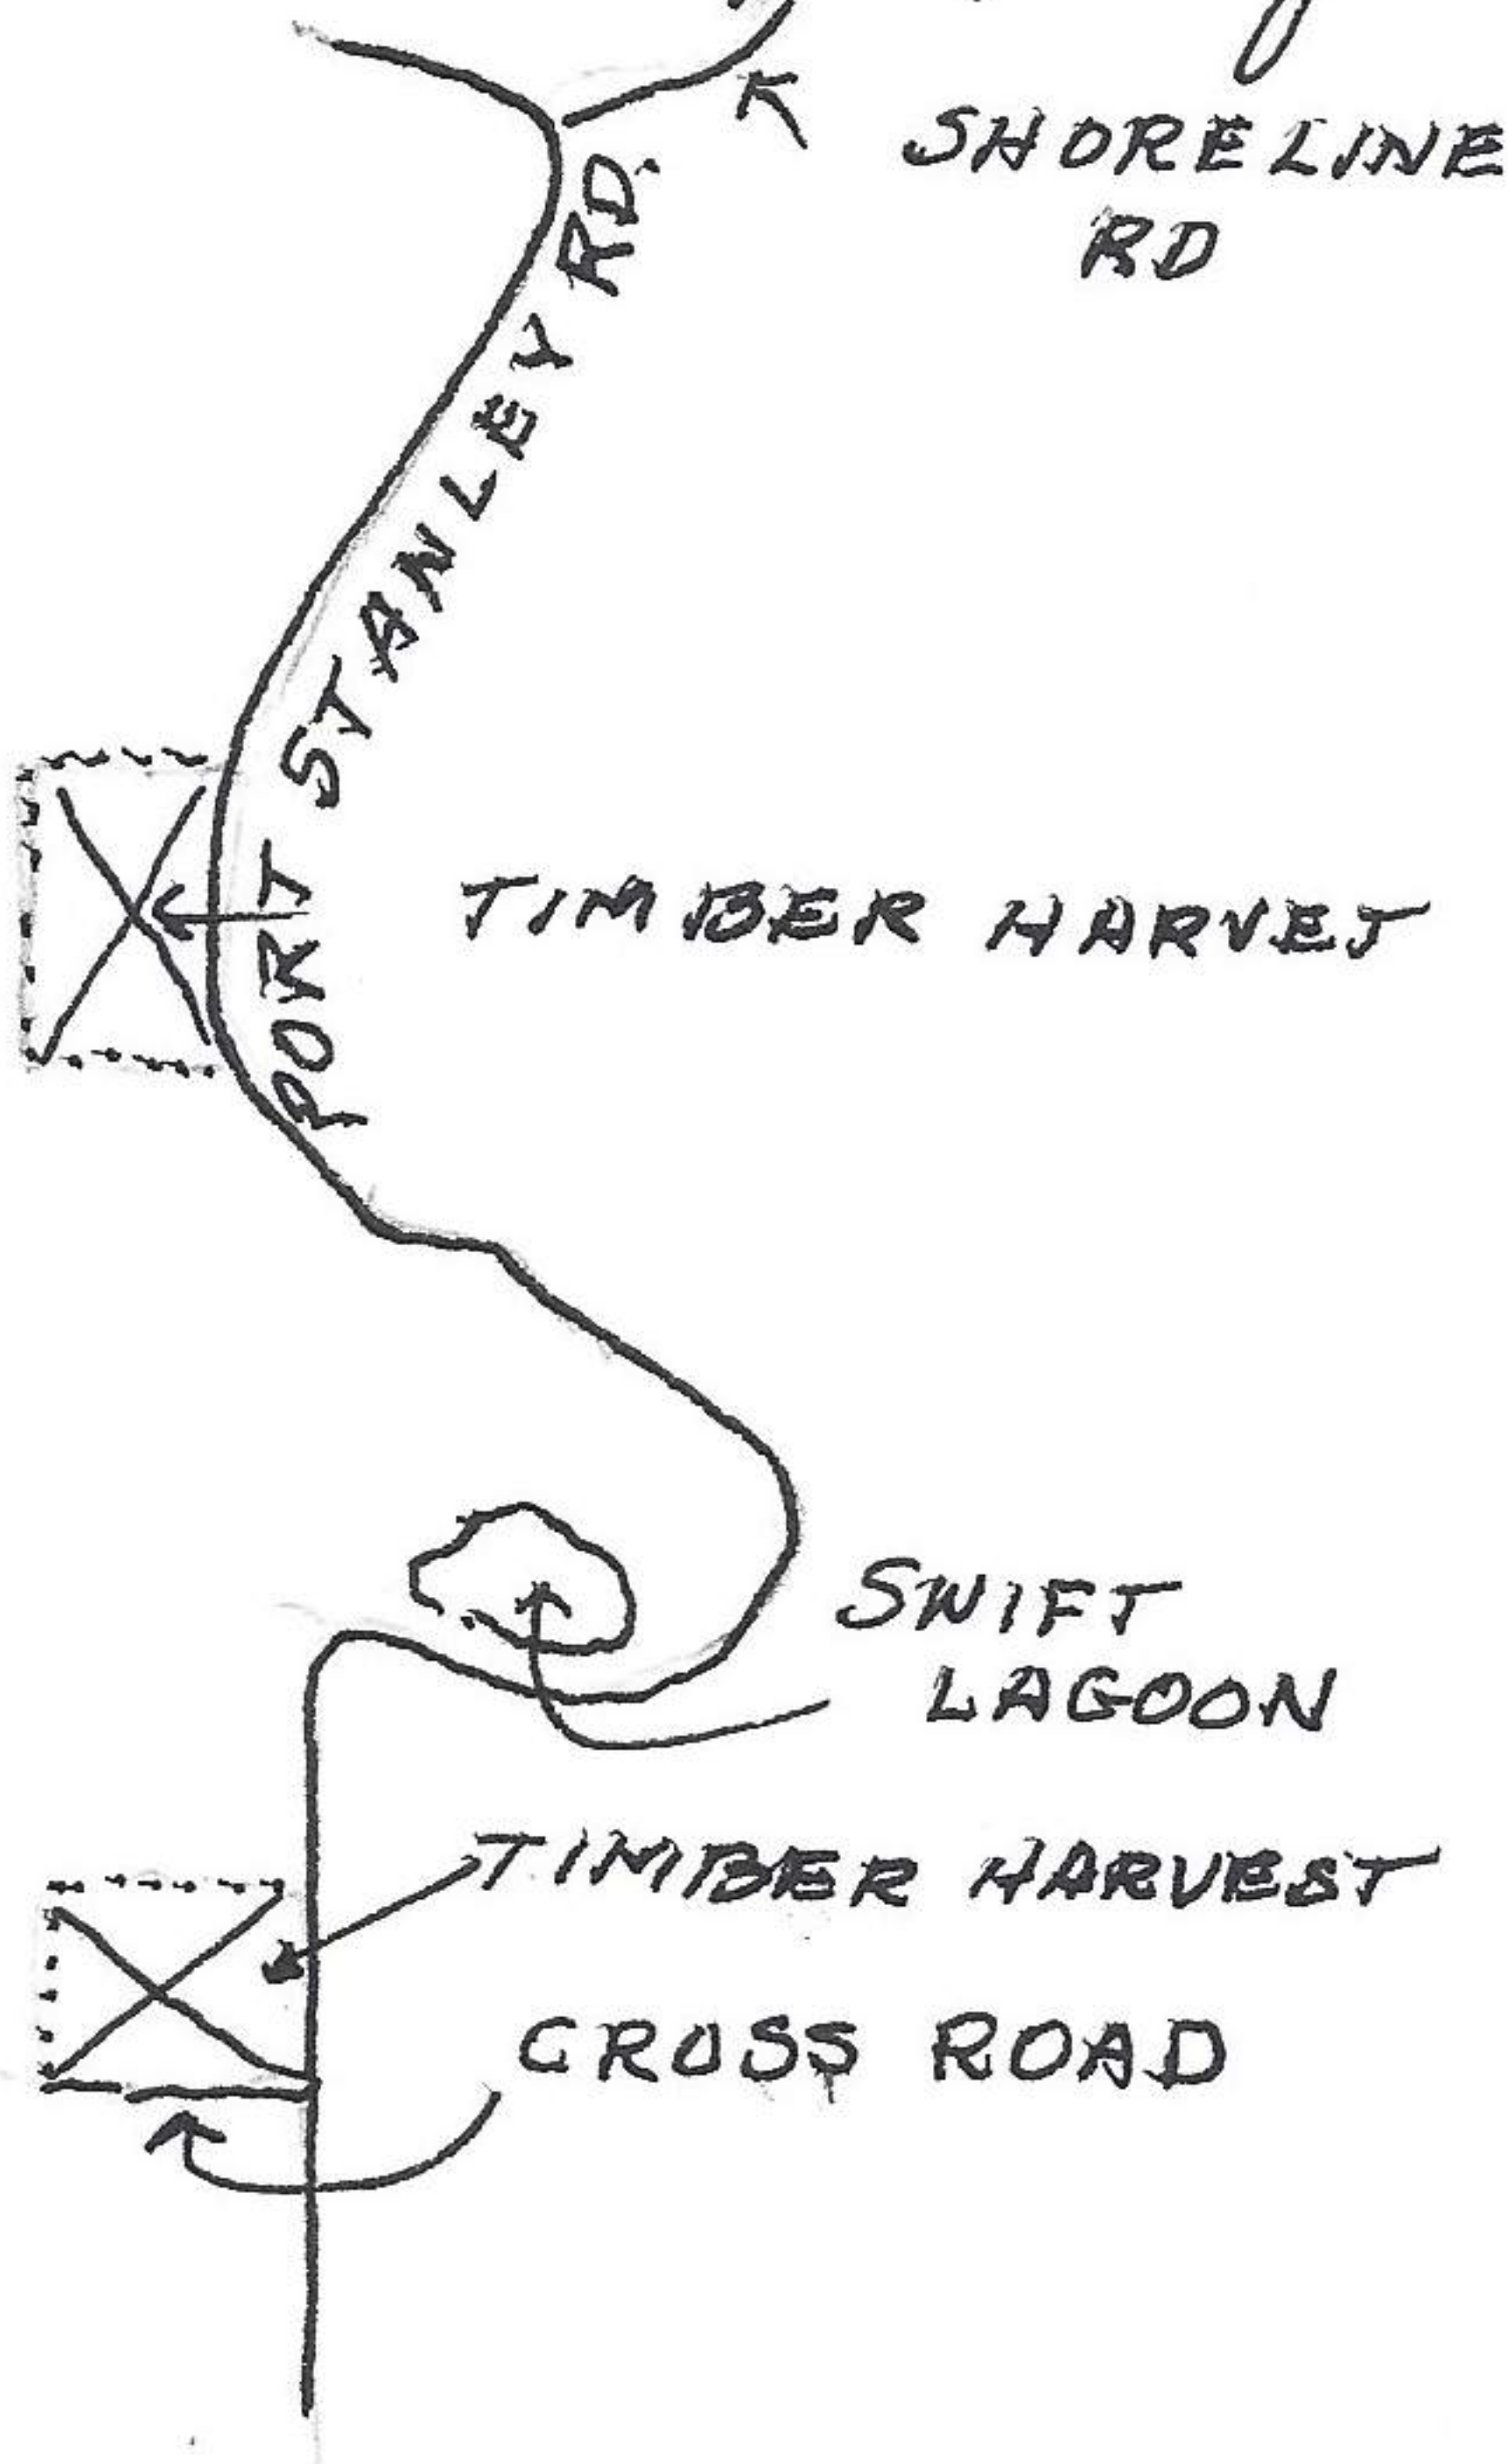

June 23, 1989

Young mule deer fawn with antler bud not yet exposed. Ocean spray turning yellowish white with round buds opening to full flower. Those in shade of Douglas fir are white, some buffy white.

June 24, 1989

a property owner adjacent to forest land to S reported that a timber company was ordered to clear <sup>5 acres</sup> forest of timber downed by the Feb 1 storm of this year. They failed to clear all fallen timber but took 22 truck loads (regular tree hauling truck) of mainly Douglas fir trees of the largest size. Each load equivalent to 125 chords of wood. The individual who was leasing this property was not notified by the owner of the arrangement with the timber company.

Another similar area harvested was land NW of junction of Port Stanley and Cross Rds. Checked both areas and it was a case of gutting instead of organized harvest.

Caught a white-spotted greenling Hexagrammos stelleri at Boundary Point on Bee Estate. It measured 270mm standard length.
