

6:27 AM AUG 15, 1992      6:29 AM AUG 16 1992

Aug. 16, 1992

This A.M. 36 boats moored Spencer Spit, 20 of which are sailboats.  
Collected ant from Bratts Ridge, Bee Estate, Humphrey Head, Lopez Island, San Juan Co., Wa:      Sunrise 6:29 AM.  
920816-1 ant.

Aug. 17, 1992

Sunrise 6:31 A.M. Spacing 1 diameter apart. 3"-4" travel thru own diameter. Jay and party arrived yesterday evening on Dick Dunham's 47' G.B.

my thoughts on the natural world: Pacific Coast Forests, Arctic tundra, deserts, marine and community types are each super-organisms of the natural world. They result from billion years of evolution and are ultimate expressions of climate which in turn is dictated by energy from the sun. Each individual community or superorganism is dynamically interrelated and balanced and is so complex that one may never be able to comprehend them. Although man has been on earth for less than a blink of the eye, he has the ability to dominate and create his own ecosystem. His ecosystem which disregards the natural system will be attained only at great effort and expense. It will be a world without oxygen and temperature extremes will drive him underground. The natural world effortlessly and without cost produces and maintains a viable world. The world should be divided into 2/3 natural and absolute non-intervention by man, the other 1/3 to be manipulated by man to the fullest extent of his abilities but must be encapsulated.

10:50 Harbor seal in area:  
32 on Leo Reef Rocks #3 to #6,  
10 on Leo Reef Rock no. 11

13 on n Flower Rock.

no bald eagles in area of nesting tree.
