

macrona berries a reddish-orange and band-tailed pigeon still feeding on them, sometimes 10-15 in one tree,

Sept. 3, 1992

Took Don and Mary to ferry terminal (dock in center, Vancouver) for their trip to Alaska via Princess liner. On return just S of end of Chuckanut Drive observed approx. 5,000 mew gulls in field, all generally distributed at approx. every 5 feet apart. Others followed a harrow.

at Odlin Bay, 9 Bonaparte gulls.

Sept 9, 1992

At Bee House ♂ mule deer  9" high antlers (no velvet), call, <sup>for</sup> 20 min from 6:30 to 6:50 AM. 4 other deer, ♀, were in area. The call is a 4 note downward cadence as a slurred moan with emphasis on first note, medium pitched. It was usually repeated every 34 seconds but varied <sup>up</sup> to 20 seconds intervals at times. The ♂ remained in same position.

When mule deer come to feeding area they raise their tails perpendicularly. The above male carries its tail completely re-curved over its back 

This AM while deer were feeding the dominate ♀ and her fawn left hurriedly and all remaining 10 deer followed at the same moment. They left the area.

This morning sunrise 7:05 AM

Sept 11, 1992
