

ALPINE STARROW

*Pyrrhuloxia alpestris* (Linn.)

*Alpestris alpestris* (Linn.)

The two species described by the present author, as well as those named by the present author, are all to be found in the same region, and therefore require a more detailed description. The first species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The second species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The third species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The fourth species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The fifth species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The sixth species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The seventh species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The eighth species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The ninth species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The tenth species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage.

ALPINE STARROW

*Pyrrhuloxia alpestris* (Linn.)

*Alpestris alpestris* (Linn.)

The Alpine Sparrow, *Pyrrhuloxia alpestris*, is a small bird, about 10 inches long, with a brown head and back, and a white breast. It is found in the mountains of the Alps, and is distinguished by its plumage. The second species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The third species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The fourth species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The fifth species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The sixth species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The seventh species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The eighth species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The ninth species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage. The tenth species, *Alpestris alpestris*, is found in the mountains of the Alps, and is distinguished by its plumage.
