

TOURNAI

Paris, 1844

By the author

It can be no doubt that the present volume of the *Journal de Pharmacie* will be found to contain some of the most interesting and valuable contributions to the literature of the subject. The author has not only collected a large number of facts, but has also given them a most judicious and comprehensive arrangement. The volume is divided into two parts, the first of which contains the history and description of the various species of the genus, and the second part contains the details of their anatomy and habits. The author has also given a full and complete account of the various diseases to which they are subject, and the means of their prevention and cure. The volume is written in a clear and concise style, and is well adapted for the use of the student and the practitioner. It is a most valuable addition to the library of every one who is interested in the study of the natural history of the human system.
