*Semioptera wallacii*, Gray,  
p. 157 (1891),  
*Epimachus wallacii*, Gray,  
Rosenb. Mi.  
*Epimachus wallacei*, Gray,  
*Semioptera gouldi*, Bonap.,  
*Semioptera halmaherae*, Gray.

This wonderful Bird was  
considered by Dr. Wallace  
expedition to the Malay  
in Halmahera, or Gilolo.  
considered sufficient to  
*Semioptera wallacii*, var.  
specimens from both islands  
of slight importance, not  
plumes, which does not  
character, and may be

Very little has been  
account of it in his work.

He thus relates his  
as I got home, I overtook  
much pleased, and said  
me. I saw a bird with  
but what I could not  
shoulder. Ali assured  
they had remained so  
feathers are seen to an  
the carpal bones."

The following note

"The *Semioptera* fr  
flies from branch to br  
as a Woodpecker. It  
and the more musical  
wings, erect the long s  
the Birds of Paradise,  
it probable that the ex  
The bird seems to feed
