

and on the coast of New Guinea opposite to Salawatty, in the same locality where Rosenberg obtained his *Casuarius Kaupi*. The species proved to be *C. uniappendiculatus*, Blyth, the same as that of the fine specimen alive in the Amsterdam Gardens, the single caruncle not being developed in the younger bird; it appeared, therefore, that *C. Kaupi* of Rosenberg must be regarded as identical with *C. uniappendiculatus*, Blyth.

In Mr. Blyth's remarks on the Bábu Rajendra Mullick's specimen, which unfortunately died when probably about half-grown, he says:—"It entirely resembles *Casuarius galeatus* of the same age in general structure; but in the colouring of the plumage there is a considerably less admixture of black than is seen in an ordinary Cassowary of the same size, the only marked distinction consisting in the very different arrangement and predominating yellow of the bright colours of the neck, and in the single small yellow caruncle in front of the neck, in place of the two larger and bright-red caruncles of the common species. Again, the nude skin of the lower part of the neck is smooth or comparatively tense, and not tumous or wrinkled as in the other. I remark, also, in the stuffed specimen, along the medial third of the back, a nude line, about three-eighths of an inch broad, parting the feathers, which flow on each side. Unfortunately the body was thrown away, not even the sex having been ascertained; but the sexes in this genus hardly differ in appearance."

At the meeting of the Zoological Society of London, held on the 23rd of January, 1866, Mr. Selater exhibited an egg which had been laid by the female bird in the Zoological Gardens of Amsterdam, and remarked that it "was of the usual form and colour of the eggs of the genus *Casuarius*, being of a pale green, thickly covered with raised spots of dark green, and measuring 5·4 by 3·6 inches."

One Plate represents the entire bird, the figure being necessarily greatly reduced; the other, two heads and necks, the front one of which is the size of life, the other somewhat smaller.
