

ANOÛS CINEREUS, *Gould.*

Grey Noddy.

Anoüs cinereus, Gould in Proc. of Zool. Soc., Part XIII. p. 104.

THIS species is a native of the seas bordering the eastern and north-eastern coasts of Australia, and is said to breed on Norfolk Island. It is in every respect a true *Anoüs*, and, so far as is known, has many habits in common with those of the other members of the genus.

Head, neck and all the under surface silvery greyish white; round the eye a narrow ring of feathers, the anterior half of which is deep black and the posterior half white; back, wings and tail light grey; secondaries tipped with white; bill black; tarsi and toes brownish black; interdigital membrane yellowish.

The figures are of the natural size.
