

ANATOMY

Part First: Physiology

The first part of the anatomy is the study of the functions of the organs of the body. It is a branch of science which is very ancient, and has been the subject of much research and discovery. The study of anatomy is necessary for the understanding of the human body, and for the treatment of disease. It is a science which is constantly advancing, and which is of great importance to the human race.

The study of anatomy is necessary for the understanding of the human body, and for the treatment of disease. It is a science which is constantly advancing, and which is of great importance to the human race.
