

ANALYSIS TEXTILES

Textile Analysis

Textile Analysis

The first step in the analysis of a textile specimen is to determine its general character. This is done by examining the specimen under a microscope and noting the appearance of the fibers. The next step is to determine the chemical composition of the fibers. This is done by using various chemical tests. The final step is to determine the structure of the fabric. This is done by examining the fabric under a microscope and noting the arrangement of the fibers.

The analysis of a textile specimen is a complex task that requires a thorough understanding of the various methods used in textile analysis. The first step is to determine the general character of the specimen. This is done by examining the specimen under a microscope and noting the appearance of the fibers. The next step is to determine the chemical composition of the fibers. This is done by using various chemical tests. The final step is to determine the structure of the fabric. This is done by examining the fabric under a microscope and noting the arrangement of the fibers.
