

HALEYON PYRHOPTOL

Red-headed Halcyon

Halcyon pyrrhoptola is one of the most common of the

The red-headed halcyon is a small bird of the family, Halcyonidae. It is found in the tropics of Asia, Africa, and Australia. The bird is characterized by its bright red head and throat, and its blue and white plumage. It is a very common bird in its native range, and is often seen in the company of other members of its species. The red-headed halcyon is a very social bird, and is often seen in large flocks. It is a very active bird, and is often seen flying about in the open. The bird is a very good singer, and its song is often heard in its native range.
