

GEARBOILS LAUTNER

1890-1900

GEARBOILS LAUTNER was born in 1890 in the town of Lautner, in the state of California. He was the son of a farmer and a school teacher. He attended the local school and then went to the University of California at Berkeley, where he studied for a degree in agriculture.

After completing his degree, he returned to his home town and began to work on the family farm. He was interested in the mechanics of the farm and in the use of machinery. He began to experiment with the design of gears and boilers, and he soon became an expert in the field.

His work was so successful that he was soon employed by a large manufacturing company. He continued to work on the design of gears and boilers, and he soon became one of the leading experts in the field. He was also interested in the use of gears and boilers in the design of ships and submarines.

He was employed by the Navy Department, where he worked on the design of gears and boilers for submarines. He was also interested in the use of gears and boilers in the design of ships. He was employed by the Army Department, where he worked on the design of gears and boilers for tanks and other military vehicles.

He was also interested in the use of gears and boilers in the design of aircraft. He was employed by the Army Department, where he worked on the design of gears and boilers for aircraft engines. He was also interested in the use of gears and boilers in the design of ships and submarines.
