

APPENDIX-BHITTOREURS, 1844.

General Principles

The following are the general principles of the system.

The first principle is that the system is based on the principle of the least action. This principle states that the path taken by a system is the one that requires the least amount of energy. This principle is the basis of the system and is the foundation of the theory.

The second principle is that the system is based on the principle of the least time. This principle states that the path taken by a system is the one that requires the least amount of time. This principle is the basis of the system and is the foundation of the theory.

The third principle is that the system is based on the principle of the least action. This principle states that the path taken by a system is the one that requires the least amount of energy. This principle is the basis of the system and is the foundation of the theory.

The fourth principle is that the system is based on the principle of the least time. This principle states that the path taken by a system is the one that requires the least amount of time. This principle is the basis of the system and is the foundation of the theory.

The fifth principle is that the system is based on the principle of the least action. This principle states that the path taken by a system is the one that requires the least amount of energy. This principle is the basis of the system and is the foundation of the theory.
