

LEBBE, GRABBE, GIBBE

General Principles

The first part of the paper is devoted to a general discussion of the principles of the method. It is shown that the method is based on the principle of least squares, and that the results obtained are independent of the choice of the origin of the axes.

The second part of the paper is devoted to a detailed description of the method. It is shown that the method is based on the principle of least squares, and that the results obtained are independent of the choice of the origin of the axes.

The third part of the paper is devoted to a discussion of the accuracy of the method. It is shown that the method is accurate to within one part in a million.

The fourth part of the paper is devoted to a discussion of the application of the method. It is shown that the method can be applied to a wide variety of problems.

The fifth part of the paper is devoted to a discussion of the results obtained. It is shown that the method is accurate to within one part in a million.
