

STATHURA PIRRELLA GAMA

Evolutionary Biology

Journal of Evolutionary Biology, 1997, Vol. 10, No. 1

The evolution of the genus *Stathura* is discussed in this paper. The genus is defined as a monophyletic group of decapod crustaceans, based on morphological and molecular data. The genus is characterized by the presence of a specific set of characters, including the shape of the chela, the structure of the swimming legs, and the arrangement of the setae on the carapace. The genus is found in the Indian Ocean and the Red Sea. The genus is named in honor of the Italian biologist Stathura Pirrella Gama.

The genus *Stathura* is a member of the family Stathuridae. The family is characterized by the presence of a specific set of characters, including the shape of the chela, the structure of the swimming legs, and the arrangement of the setae on the carapace. The family is found in the Indian Ocean and the Red Sea. The family is named in honor of the Italian biologist Stathura Pirrella Gama.
