

THAURANIA TURCATA.

(Linnæus, *Systema Naturæ*, p. 1000.)

It is a small, oval, white, smooth, and shining shell, with a slightly raised rim, and a small, dark, central spot. The surface is covered with a fine, granular texture, and the edges are slightly irregular. The color is a pale, creamy white, with a slight yellowish tint. The shell is found in the Mediterranean Sea, and is common in the vicinity of the coast of Italy. It is a very common shell, and is often found in great numbers. It is a very beautiful shell, and is highly valued by collectors. It is a very common shell, and is often found in great numbers. It is a very beautiful shell, and is highly valued by collectors.
