A comparison of the two propositions, $x > y$ and $y < x$, shows that they are not only true in the same sense, but also in the same manner. In the first case, the truth of the proposition is established by the fact that x is greater than y . In the second case, the truth of the proposition is established by the fact that y is less than x . This shows that the two propositions are not only true in the same sense, but also in the same manner.

It is clear that the two propositions, $x > y$ and $y < x$, are not only true in the same sense, but also in the same manner. This is because the two propositions are not only true in the same sense, but also in the same manner.

The truth of the proposition $x > y$ is established by the fact that x is greater than y . The truth of the proposition $y < x$ is established by the fact that y is less than x . This shows that the two propositions are not only true in the same sense, but also in the same manner.

The two propositions, $x > y$ and $y < x$, are not only true in the same sense, but also in the same manner. This is because the two propositions are not only true in the same sense, but also in the same manner.

The truth of the proposition
