† Day Telegraph. ‡ Day and Night Telegraph. * Meals.

The passenger's attention is directed to the elevation of each station.

The *Silver State*, a weekly newspaper, is published here. Winnemucca is the great distributing point for a number of mining districts to the north and south, and does an extensive freighting business. Many herds of cattle and sheep range the adjacent country, and large numbers are brought here for shipment to California.

MUD LAKE—is about 50 miles west of this station across the Humboldt, which here turns to the south, and is one of those peculiar lakes found in the great basin of Nevada. The lake receives the waters of Quinn's River and several smaller tributaries during the wet season. It has no outlet, unless its connection with Pyramid and Winnemucca lakes could be so designated. It is about 50 miles long by 20 wide, in high water; in summer it dwindles down to a marshy tract of land and a

large stagnant pool. At the head of the lake is Black Rock, a noted landmark, in this part of the country. It is a bold, rocky headland, rising about 1,800 feet above the lake, bleak, bare, and extending for several miles. It is an isolated peak in this desert waste, keeping solitary guard amid the surrounding desolation.

PYRAMID LAKE—is about 20 miles south of Mud Lake, which receives the waters of Truckee River. It is about 30 miles long by 20 wide during the wet seasons. The quality of the water is superior to that of Mud Lake, though the water of all these lakes is more or less brackish.

WINNEMUCCA LAKE—a few miles east of Pyramid Lake, is another stagnant pond, about 15 miles long by ten wide. This lake is connected with Pyramid Lake by a small stream, and that in turn with Mud
