

Warning: Sun Worshippers

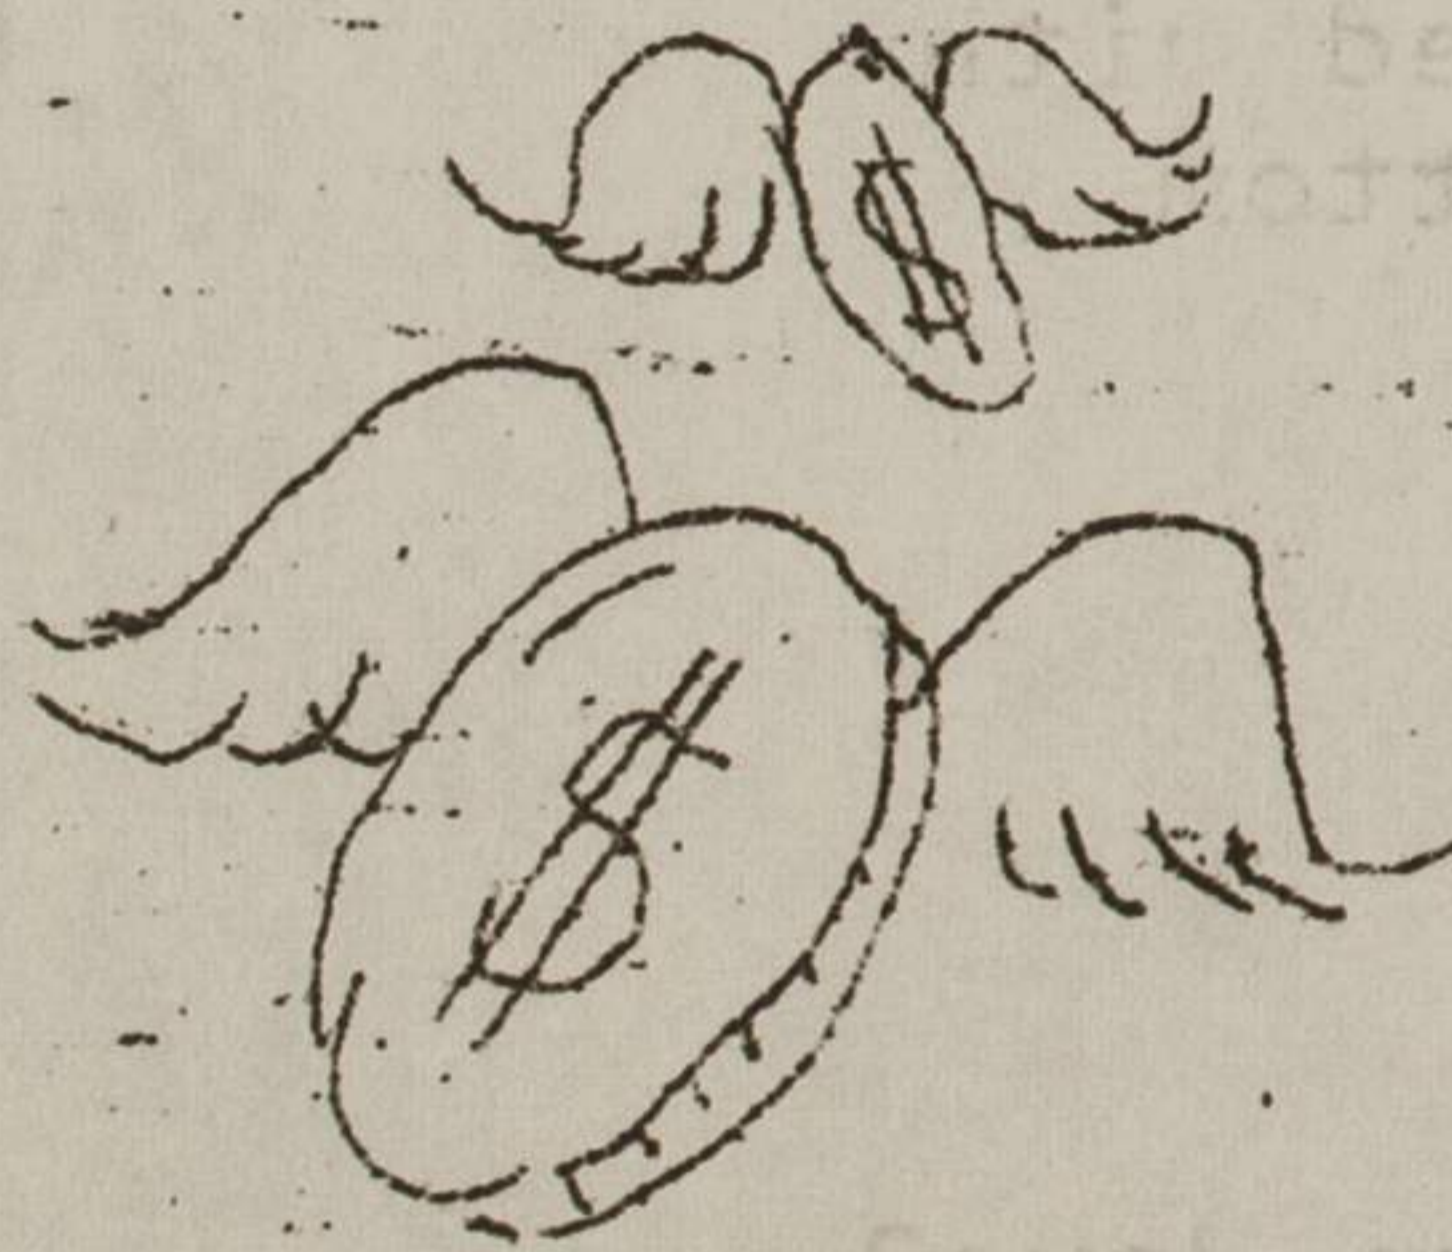

Continued exposure to sunshine is a factor in skin cancer. Kansas had 1,035 cases of skin cancer reported in 1961. This was almost one-fifth of the total of all types of cancer reported.

Sunlight alone did not cause those thousand-plus cases of skin cancer, of course. It is possible it played a part, however.

The ultraviolet rays of sunshine not only burn and tan. They may eventually stimulate abnormal changes in human skin. Years of exposure increase the possibility. Fair-skinned people-especially with red or blonde hair, and blue eyes-are most susceptible. Constant exposure to the sun can also promote skin cancer in some brunettes.

Cancer of the skin is a form of cancer, after all.

IT'S ONLY A DREAM

I dreamed I had a million dollars and never need work again,  
I thought of all the things I could do with that million "bucks".  
I could buy a finer house and the sportiest of automobiles.  
I could buy my wife everything she wanted.  
I was in clover.

In my dream I dressed and went downstairs to breakfast. But there wasn't any!

My wife was in tears - no food had been delivered - not even a bottle of milk - nor the morning paper. She tried to phone the grocer - but the line was dead.

I went outside - the street was deserted - not a bus or automobile in sight. I walked on and on. Nothing was moving. A few people appeared - and I began to ask questions.

"What has happened? Where can I buy food?"

Then I got a jolt. Someone said, "Don't you know" everyone has a million dollars, and nobody has to work."
