

July 12, 1940.

Mr. C. G. Bayles,
Superintendent,
Buildings & Grounds.

Dear Mr. Bayles:

Recalling our conversation about the need for painting to be done in the gymnasium, I feel that the basement on the men's side is in most urgent need of painting. The shower room and the floor are particularly bad. We feel by keeping the floor painted we do much to eradicate athlete's foot.

Of course, you will not forget the pipes in the pool. These are badly rusted.

The women's side of the basement is not in such bad condition, but of course a coat of paint would freshen it up considerably.

On the first floor of the gymnasium, the men's shower room in the Intramural Office needs painting. The floor of the metal cabinet built in there is rusted badly. All of the offices would be much more attractive and cleaner with a fresh coat of paint.

Of course, you mentioned to me the painting of the space between the floor board and the border on the wall upstairs on the basketball court. This large gymnasium is where so many people come as visitors to watch basketball practice or other events going on there - in fact, more people come up to that floor than to the first floor.

I appreciated the fact that you stated you were going to re-wire the gymnasium. This will add much illumination and help a situation that has been bad for years. I might also mention that the floor in the hall leading from the Athletic Office to the Intramural Office is worn badly.

We are happy to learn that you are feeling much better. May you continue to get back to your high-powered efficiency.

Sincerely yours,

Director of Physical Education and Recreation,
Varsity Basketball Coach.
