QUOTATION TO

Dr. Forrest C. Allen, Dir, of Phy. Education
University of Kansas
Lawrence, Kansas

Dear Dr. Allen:

We submit for your consideration and approval our rough sketches and estimate to furnish a dual system of basketball scoreboards.

In the first place we find, after careful consideration, that the master clock system, whereby one of the clocks is operated from a master clock by means of a shaft or some other mechanical device is impracticable so far as our type of scoreboard is concerned.

We recommend the use of two scoreboards as shown on our sketch. These scoreboards to be placed together at right angles to one another and from these two boards we will provide short lengths of 10-lead cables to be extended down to two female receptacles and fastened to the backstop frame. from that point on and within a few feet of the scorers table, additional 10-lead cable will be furnished, this cable to be provided with a double-head, each head to have a male plug. that is, at one end of the cable and at the other end a female plug will be provided. It is to this female plug that the standard cable that goes to the control box will attach.

This means that both boards will operate from one control box and we know this to be full proof since we have other installations now in use operated in this manner.

We will furnish the two boards arranged as putlined above and to include the necessary male and female ends, control box and 130 feet of 10-lead cable, which we understand will be needed, for the sum of.. \$ 397.50, freight paid to Lawrence, Kansas.

This estimate does not include installation labor or any fixtures that will be needed to attach the scoreboards to the basketball braces nor any special stand. We believe you are in a better position to furnish the fittings than we are.

Respectfully Submitted
