

Selective Control

the **IMPROVED** FIGUREGRAM Control Box

Actual Size:
13 x 7 x 4½
Inches.

Only the Porter FIGUREGRAM Score Board has this selective type of Control Box. Punch the button and the desired score numeral lights up. If you want "1" punch "1"—if you want "8" punch "8". No backing up or running through ten digits to make a correction. The simplest and easiest-to-operate kind of Score Board Control Box! Control buttons work like adding machine keys.

FURNISHED WITH OR WITHOUT TIME-OUT CLOCK

The improved Porter FIGUREGRAM Basketball Score Board is supplied with or without a "Time-Out" clock. When furnished with a "Time-Out" Clock the "Time-Out" Clock is built into the control box, as illustrated above. When supplied without a "Time-Out" Clock this feature is not present, but otherwise the Control Box is as illustrated. The "Time-Out" Clock works in synchronization with the Score Board spectator Clock. When the "Time-Out" Button is punched the spectator clock stops, the horn sounds, the "Time-Out" Clock starts, and the red signal light in the Control Box lights—all at the same instant! When the "Time-In" Button is punched the "Time-Out" Clock stops, the horn sounds, the spectator clock starts and the red signal light goes out—all at the same instant! The "Time-Out" Clock then automatically resets itself.

There is a separate button for starting the spectator clock.

The "Time-Out" Clock and red signal light are housed under a dust-proof unbreakable transparent cover.

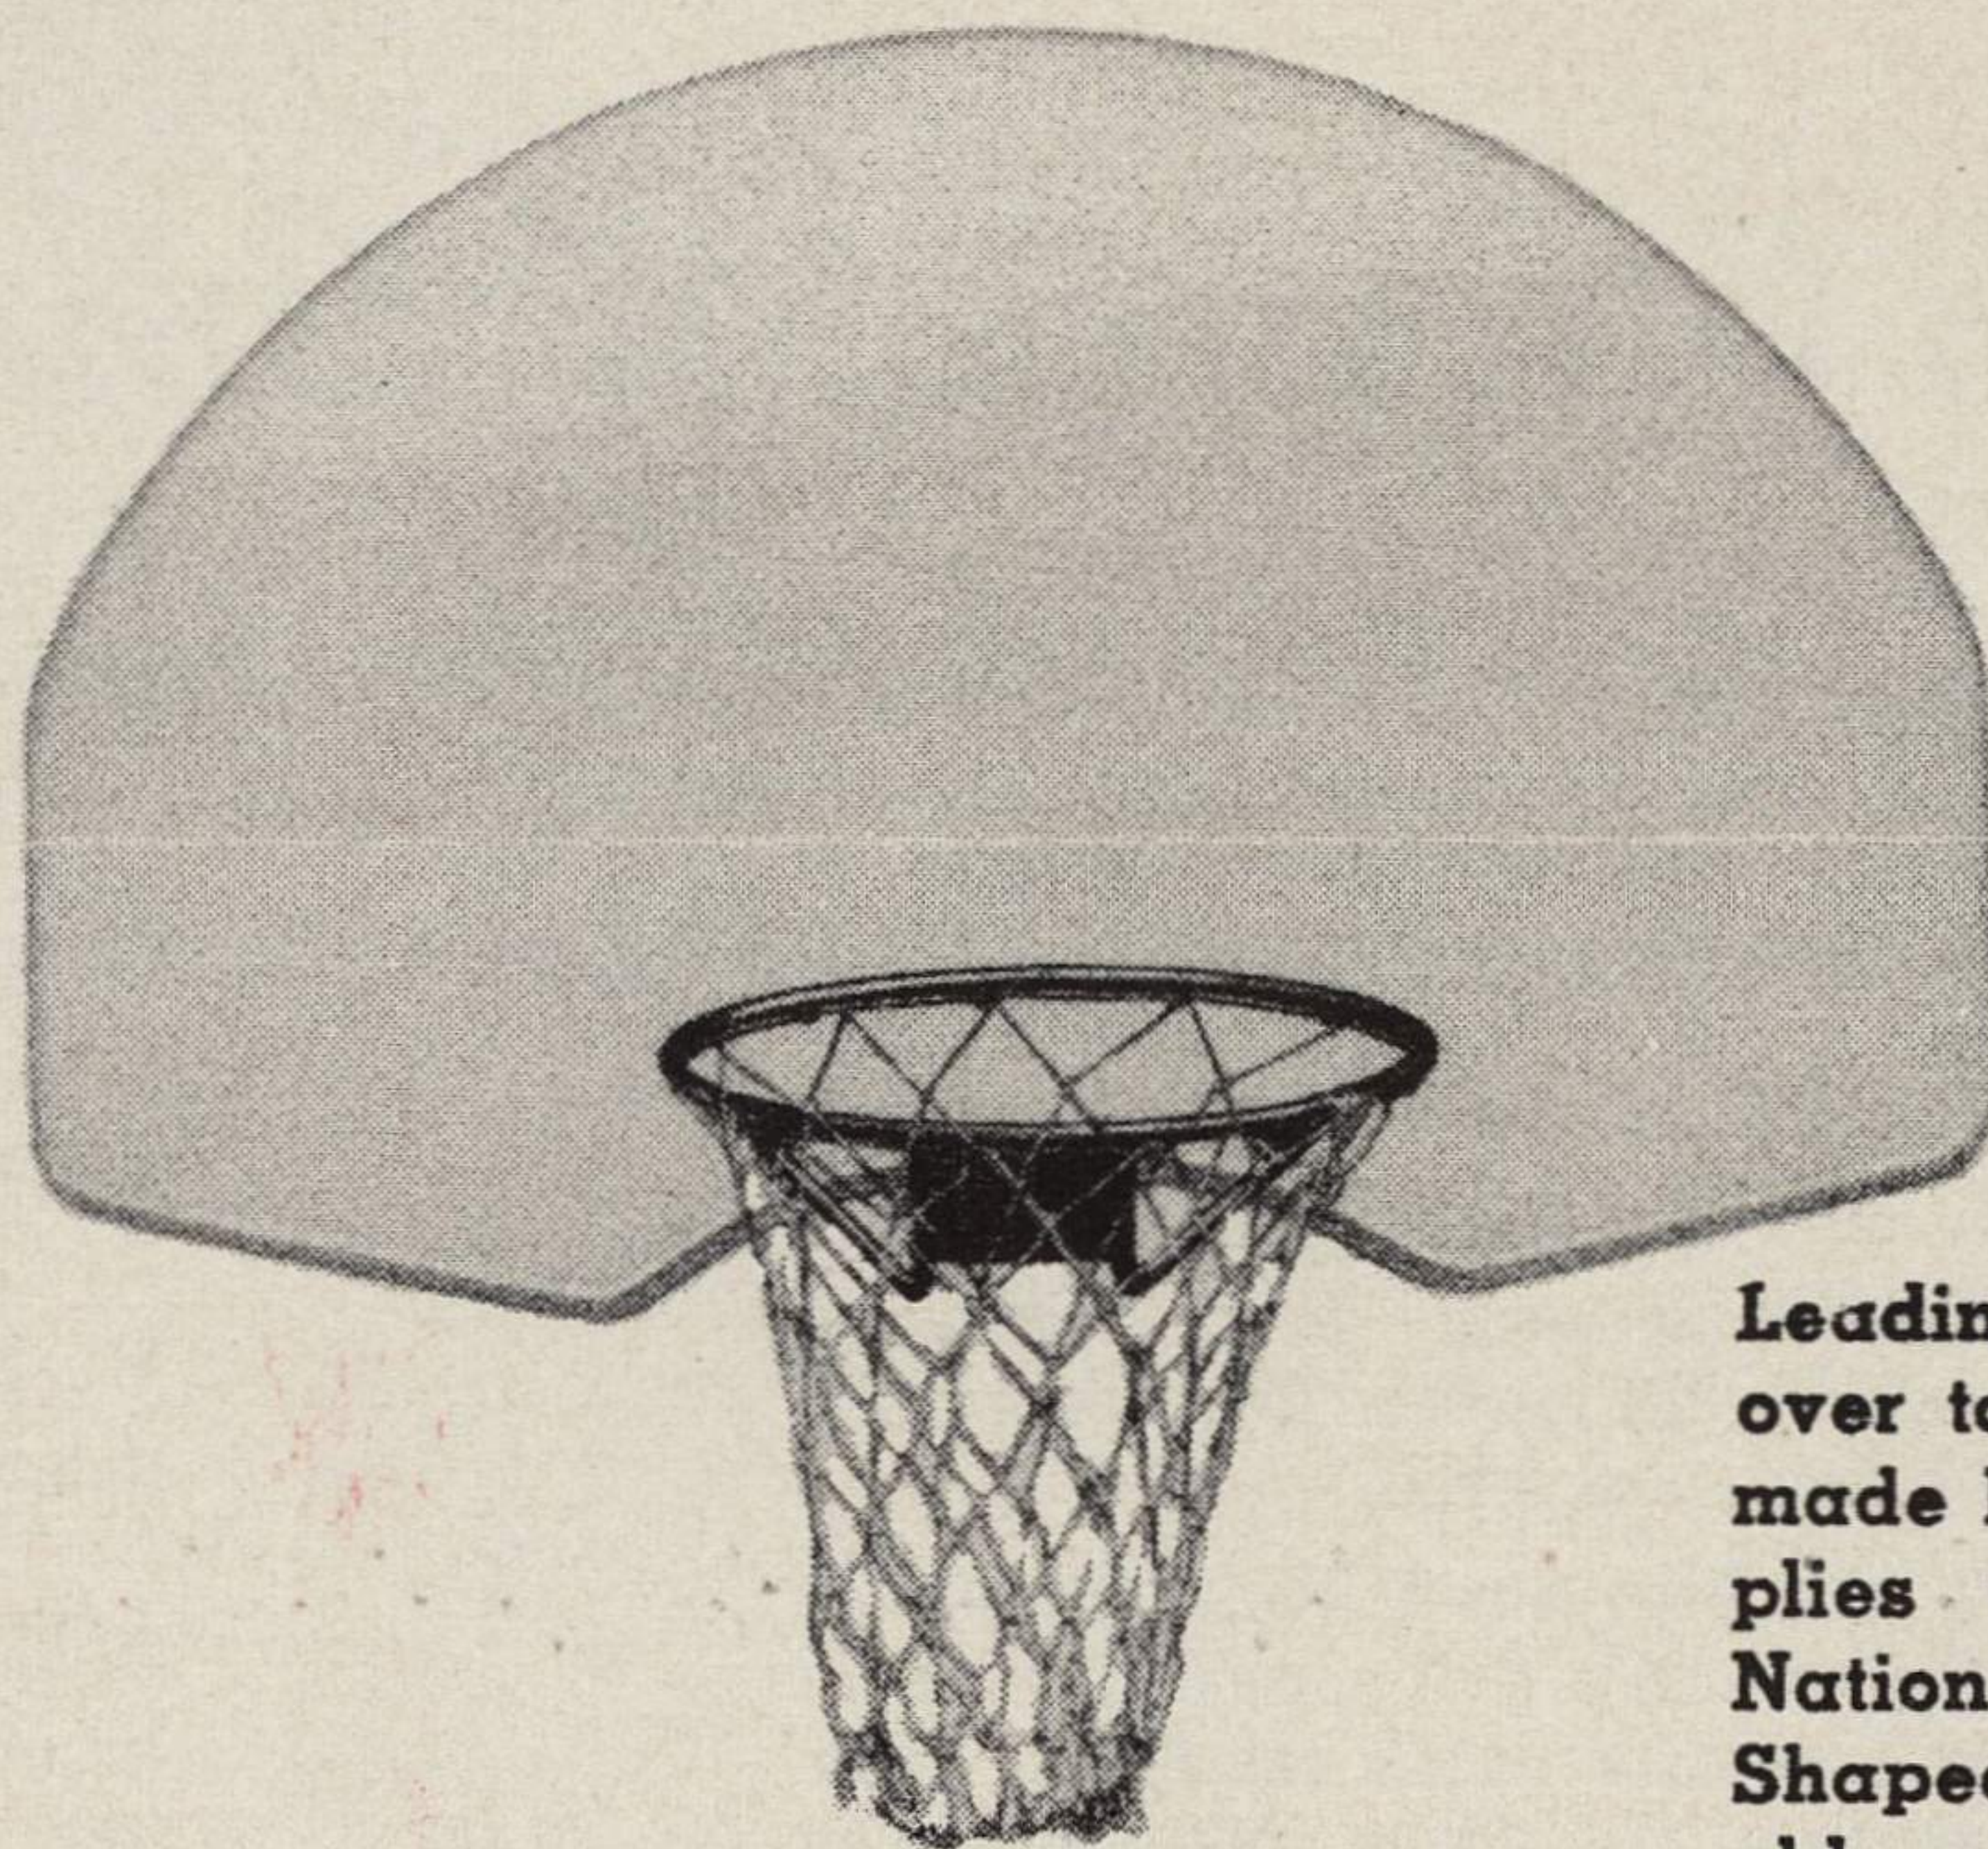

FIREPROOF

All materials used in the manufacture of the Porter FIGUREGRAM Basketball Score Board meet the specifications of the Fire Underwriters. Check this important safety point when buying an electric score board.
