

At last! A satisfactory Epsom Salts rub

MAG. SULF. RUB

(Upsher Smith)

(Glycerite Mag. Sulf.)

**For Sprains, Bruises, Sore Tendons
and other external injuries.**

A concentrated solution of Epsom salts, suspended in a lubricating base, penetrating, drawing, soothing, cooling, but will not blister. Ready for immediate use.

Trainers have long valued the healing properties of Epsom salts in the treatment of local injuries, using wet packs of the solution. Only a small portion of the salts at best comes into action when applied in this way.

In order to improve on this method a series of experiments was undertaken with the object of combining the Epsom salts with a lubricant, in order to secure thorough penetration of the remedy into the injured tissues. After scores of trials, in collaboration with an expert trainer, this improved product, Mag. Sulf. Rub (Upsher Smith) was pronounced perfect.

Always ready for instant use
