

Memo from Mr. Kanehl --

Diving Board -- we have a new 14 ft. board with fulcrum which was purchased in anticipation of a new pool.

In regard to construction of the pool - reference is made to Plan No. 1, of Nov. 24, 1944. in which case (since the pool is for instruction purposes primarily) the plan was to leave the greater surface of water at 6 ft. and less in depth -- 35 ft. of shallow water. The original plan, however, was a 10 ft. depth of the pool, which would be more satisfactory in maintaining that much shallow water.

Ladder -- In view of the narrow construction of the pool width, it is advisable to have a recessed ladder, from a safety standpoint.

Dr. Invent Kanehl
