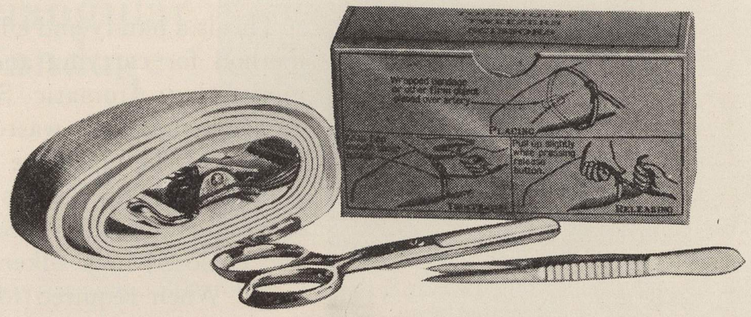
Tourniquet, Tweezers and Scissors

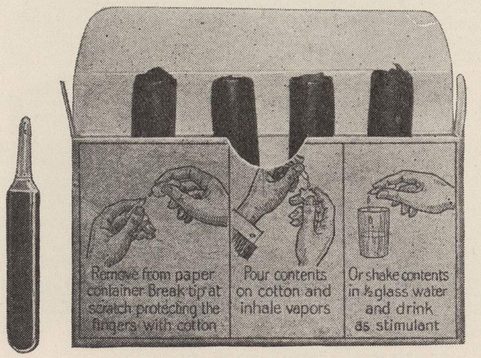


This outfit is considered as two units although placed in one container. The scissors and tweezers are exceptionally well made and are indispensable to a first aid kit. The scissors are used in cutting bandages and clothing, and the tweezers in removing splinters, glass and the like. The tourniquet, intended primarily for use in stopping arterial bleeding from the arm or leg, can be easily applied. The special buckle insures a perfect grip and a pad protects the skin.

Price per pkg., $.85

Ammonia Ampoules

(2 c.c.—4 per pkg.)



Each ampoule contains one dose of Aromatic Spirits of Ammonia, and should be administered in half a glass of water as an internal stimulant when the patient is conscious. Each ampoule is protected with cotton and sealed in a cardboard container.

Price per pkg., $.30
