First Aid and Life Saving Catalogue of Supplies and Insignia

PRICES OF SUPPLIES listed in this Catalogue are post-paid. Orders for them should be addressed to the First Aid and Life Saving Service either at the National Headquarters in Washington, D. C., for the Eastern area or at the Midwestern and Pacific area branch offices, of which the addresses and jurisdictions are listed on the opposite page. Remittances by draft or money order should in all cases be made payable to the American National Red Cross.

The Unit Type First Aid Kit

The Red Cross has installed the Unit Type First Aid Kit as its standard equipment.

This type consists of a complete assortment of approved first aid materials put up in standard unit packages each measuring 4 inches long, 2½-inches wide, and 5/8-inch in thickness, systematically arranged for convenience.

Although it is difficult to prepare a first aid kit to meet all needs, the material contained is adaptable in part, at least, to every kind of accident. If substitutions are desired for any of the standard fills, they may be obtained at a slight variation in price, depending upon their nature.

The filled container is quite compact. The units are so firmly placed that they do not become disarranged in handling or shipping, although they can be readily withdrawn or replaced.

The contents of each package are clearly indicated on the top in bold type. The various units are thus readily distinguished, and they may be withdrawn from the kit as needed without disturbing the rest. Illustrations and instructions for their use are printed on each package.

A unit package contains one or more complete applications. Each dressing is complete in itself, with sufficient material for a single injury. The dressings are enclosed in sealed envelopes to keep them sterile. All liquids, such as castor oil, ammonia, iodine, etc., are put up in a hermetically sealed tube or glass ampoule, which prevents deterioration and eliminates the possibility of the breakage or spilling of a bottle.
