So.

The first step in the process of industrial engineering is the selection of a field of study. This is a decision which is of great importance, as it determines the nature of the work which will be done. The student should choose a field in which he has a genuine interest, and in which there is a wide range of opportunity for advancement. The next step is to select a college or university which offers a course in the chosen field. This should be done with care, as the quality of the instruction and the facilities available will have a great influence on the student's progress. The final step is to enroll in the course and to devote himself to the study of the subject. This requires a great deal of hard work and perseverance, but it is also a very rewarding experience.
