

"Live" Springiness, Extreme Durability

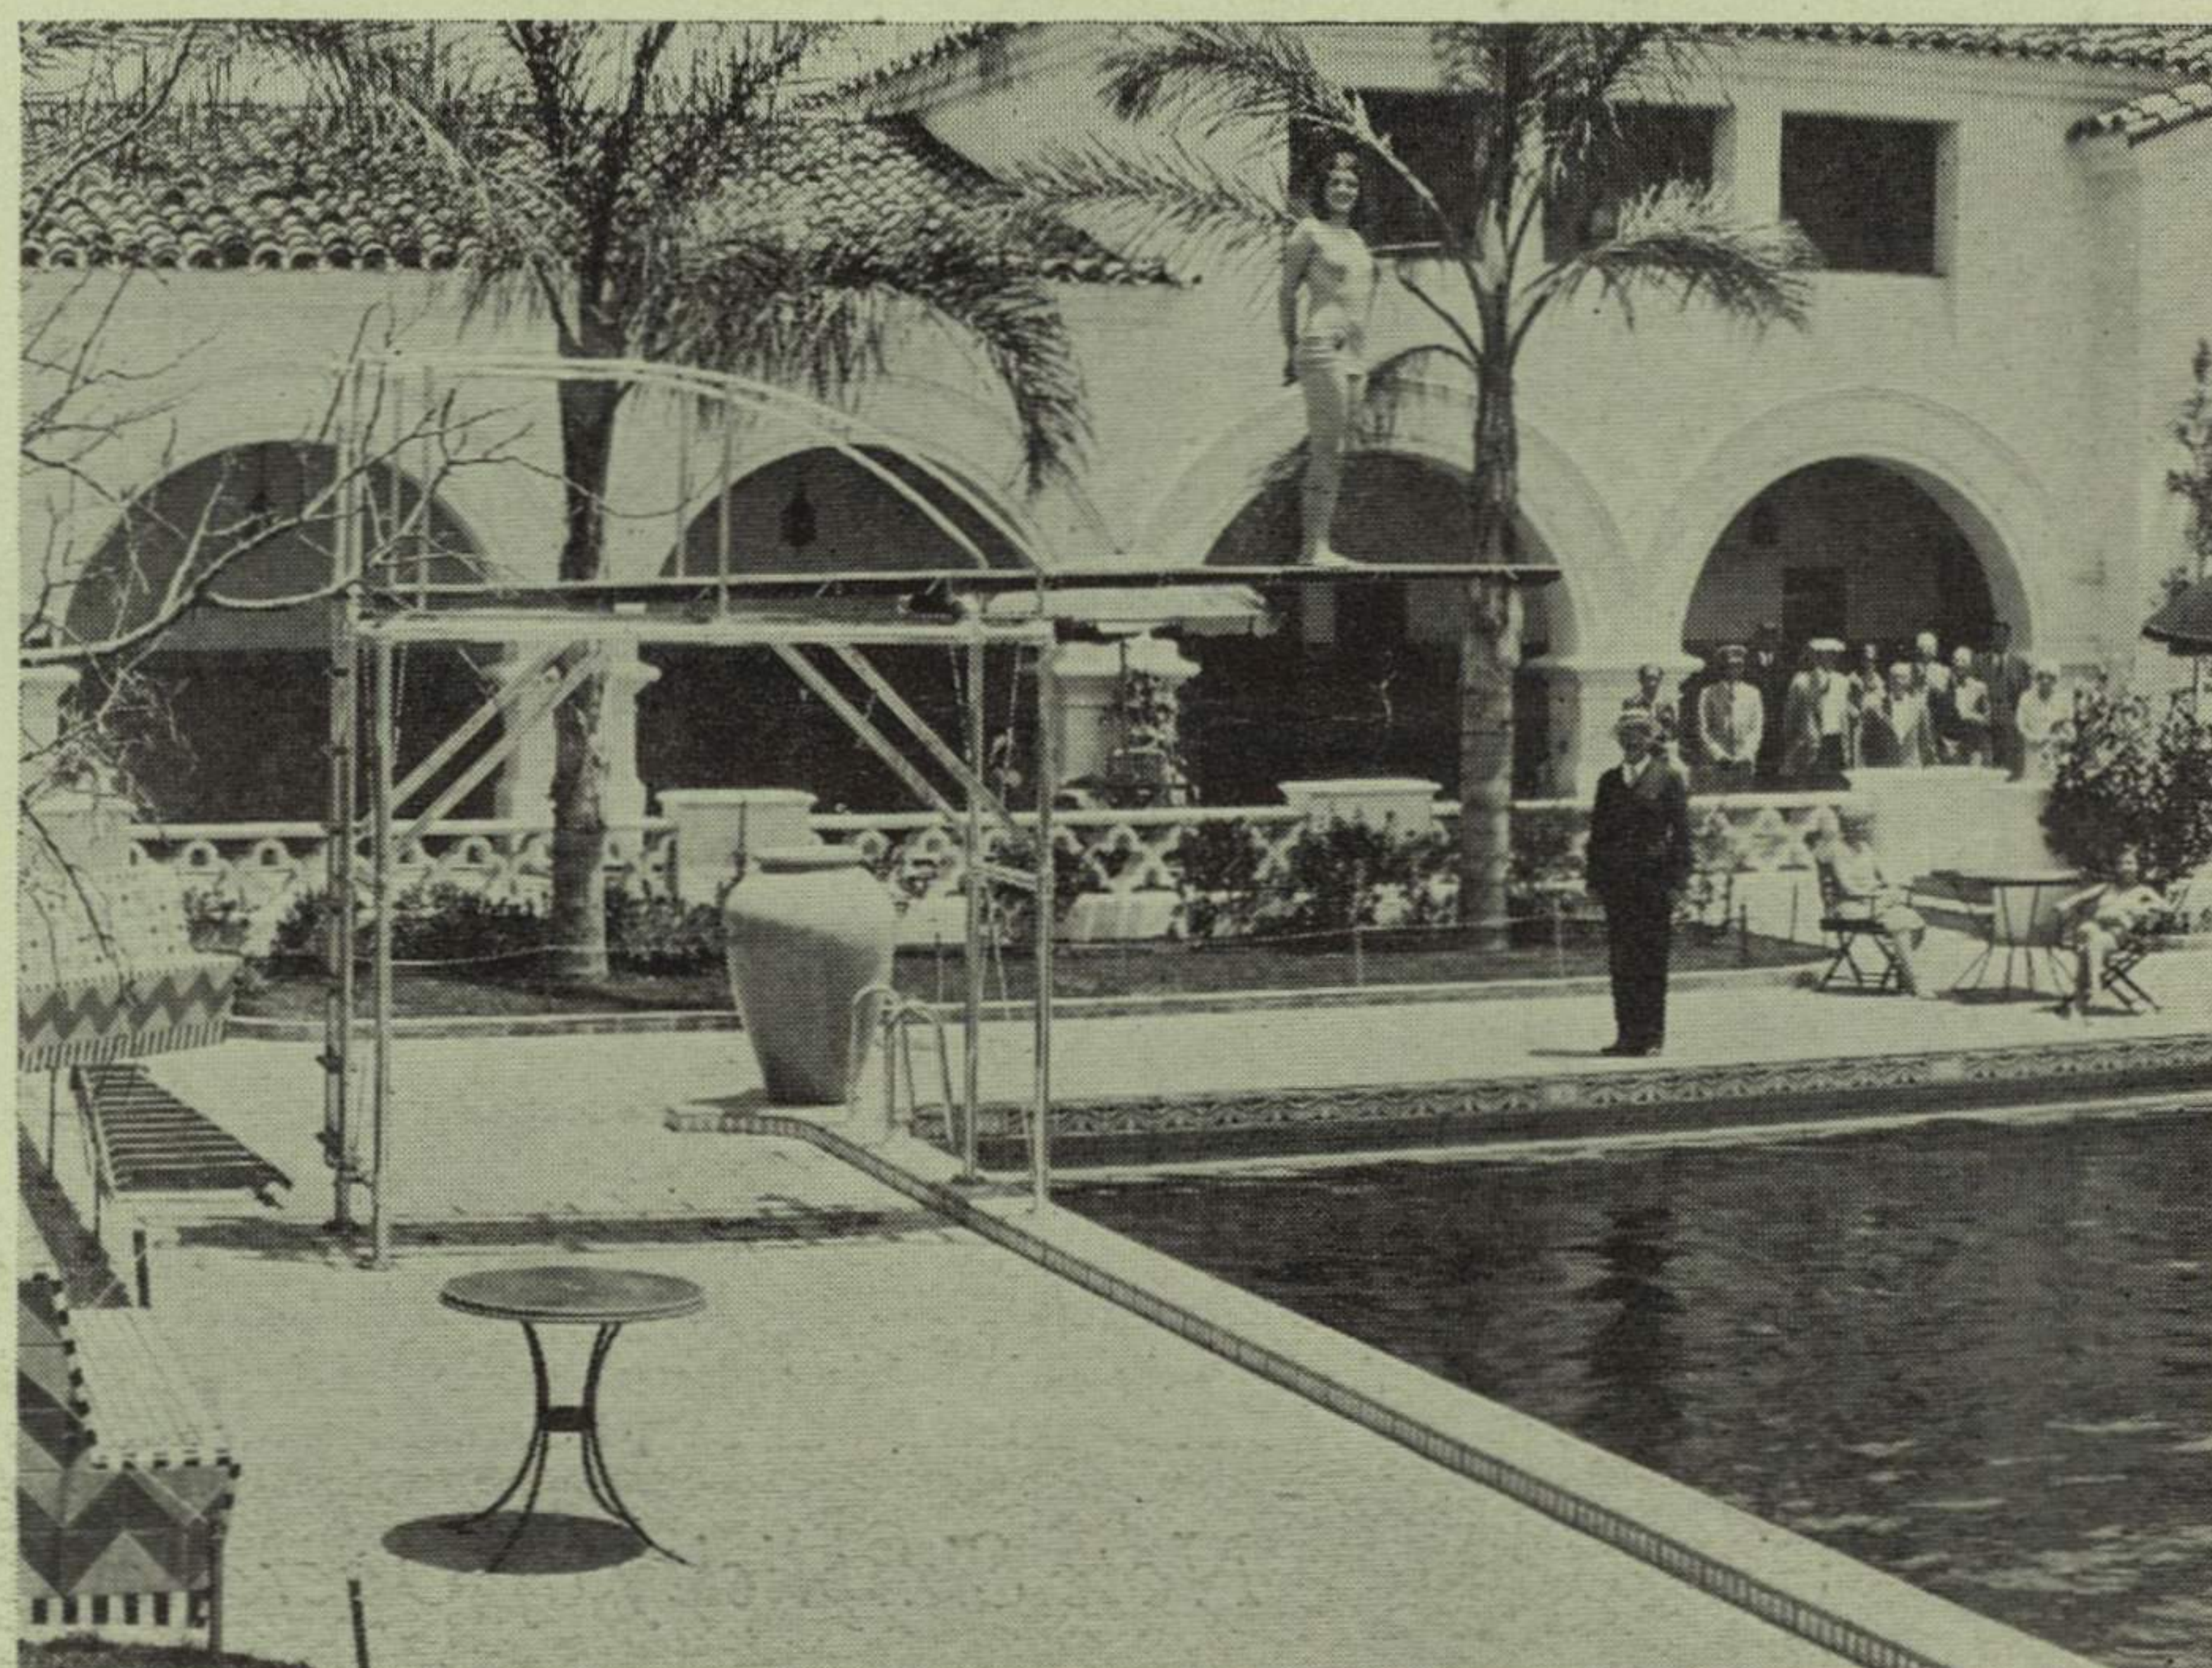

Outstanding Features of the

~~Spalding~~ Official International and Intercollegiate

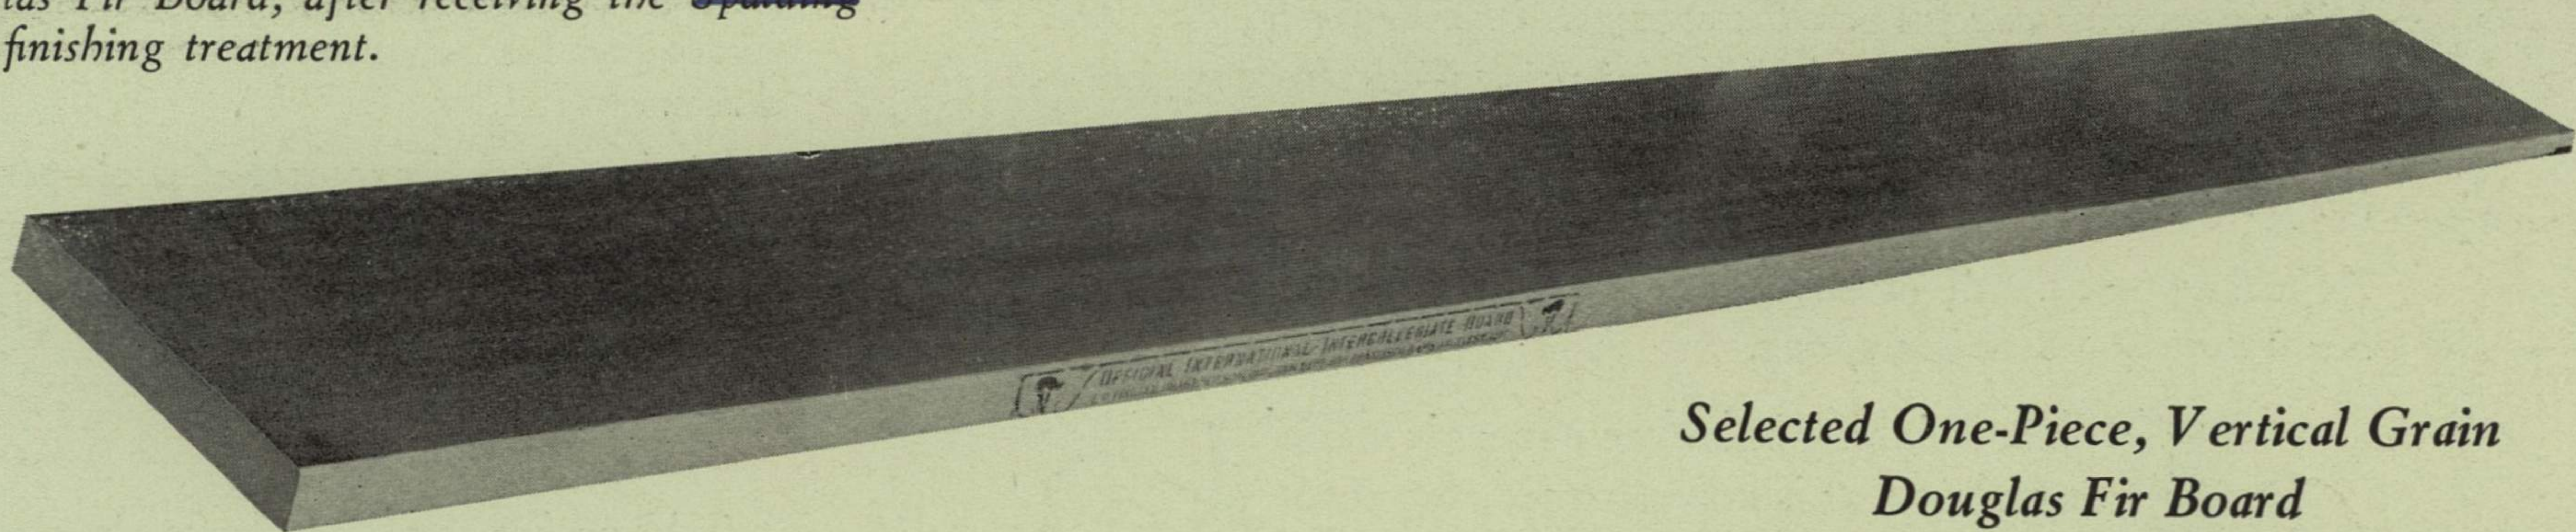

Swimming Pool

Spring Board

The ~~Spalding~~ 3-Meter Board, "high-spot" at the Spa, famous Oriental pool, Agua Caliente, Mexico. Installed by E. P. Finigan.

A typical high-grade, one-piece, 16-foot Douglas Fir Board, after receiving the ~~Spalding~~ finishing treatment.

Selected One-Piece, Vertical Grain Douglas Fir Board

No other lumber is so marvelously adapted to Spring Board use as Douglas Fir. This is due to its astonishing combination of resiliency and strength. Our agents go into the Northwestern forests and carefully check the trees to be felled for our Boards.

Then rigid inspections follow: after the first cutting; before shipping to our plant; upon receipt by us of the rough boards; when delivered to the planing mill; after tapering operations are completed; and after the finishing and treating processes.

The completed 20" Board, in either 14' or 16' lengths, handsomely finished, sides painted white, with official stencil, will stand up magnificently to heaviest usage, under severest climatic conditions.

Write for full details, including prices.

It's the radically new ~~Spalding~~ method of finishing the wood, so as to leave the natural sap in, which preserves indefinitely the "live" springiness of our Spring Board. And the Inwood process of sealing-in this "live" springiness with waterproof elastic material prevents warping.

The owner of an outdoor pool in a hot climate will particularly appreciate these vital advantages. He knows from experience that the conventional board dries out and breaks comparatively quickly. Our Board l-a-s-t-s—AND DOES NOT HAVE TO BE OILED!
