

February 7, 1938.

Mr. Frank H. Frost,
Director of Intramural Sports,
University of Georgia,
Athens, Georgia.

Dear Jack:

I am happy to hear from you in your letter of the 5th instant. I am, of course, very much pleased to have your very splendid comments on my book, "Better Basketball". I worked hard and earnestly on the book, and am glad it meets with your approval.

I am very sorry about the misfortune that came to your little daughter. Jack, I believe the fall that caused her to break her arm also produced a shoulder and neck injury. Many people will remember the fracture, but they perhaps forget what a terrific fall it must have been to cause a break of the arm. In my opinion, the shoulder girdle, the scapula, is the thing that is causing the trouble.

The insertion of the muscles into the scapula and the area around the shoulder is at fault, I believe. Remember, the attachment of the muscles along from the scapula to the cervical vertebrae in the neck. I would suspect that she would have a "wry neck".

I would be glad to see your little girl and make a diagnosis for her, because I believe I can find the cause of the trouble. I expect to attend the sessions of the National Physical Education Association which is meeting at Atlanta, Georgia, on April 20-23. Mrs. Allen and I are expecting to attend, and if it is convenient for you to be around Atlanta at that time I would be glad to look at her for you.

If I were you I would get a heat lamp and thoroughly warm that scapula shoulder blade and neck area with this therapy lamp. Do this each night, and knead the tissues gently around the cervical and shoulder region. Radio-diathermy is the thing that should be used and used by intelligent people. I do not know whether you have any first class osteopaths in Athens, or not, but if you had one who understood his business I would certainly have an examination by a competent osteopath.

Won't you write me a history of her injury and what you have done since the fracture? Give me all the details, as well as her age, height and weight, whether she is anemic, or has any calcium deficiency. Is she thoroughly healthy in every other respect? Do you
