and in the Buffalo Evening News, Jan. 3 and March 7, 1940.

Blood Pressure Studies on Basketball Players in Olean N.Y.
C.A. Greenleaf, M.D., The Journal of School Health, Feb. 1940.

Most of the physicians all over the country who have supervision of school health protest against the game as it is now being administered. You will notice that I did not append any of these references to my article. There is such a general protest against this thing that I thought it would be best to take the entire responsibility for the article at the present time and then let the physicians state their own case as the article causes comment and discussion.

Thank you for giving me the information and background regarding Marshall Diebold's inquiry. This clears up the points that I desired to know.

If the article is accepted then you can give night
want su Committee
of both -- ~~of~~ America and the Joint Basketball
Rules Committee for a number of years. I'm not serving in that capacity
for either one of them at present. Therefore, I feel that I can make these
statements as an individual and not as an official of either organization.
I feel that my position is stronger now that I'm speaking as an individual
and as a coach and as the Director of Physical Education and Recreation.

After Mr. Gingrich and you have looked over the article I'd be glad to have your diagnosis and your prognosis.

Sincerely,

FCA/PG

Director of Physical Education and Recreation
Varsity Basketball and Baseball Coach

P.S. Did you get the Evaluation of Team and Individual Performance in Basketball brochure?
