- 2. Dropping #30 and 63 -- require #40 of both men and women majors.
- 3. Attempting to see if #30 with some of same content changed to an introductory course could be accepted by State Board as a health course.
- 4. If course outside of the department must be substituted require course #2 of the Physiology Department "Applied Physiology and Hygiene" two hours to replace course 63 for women as a requirement other than major.
- 5. Require course #2 Physiology Department to replace #30 for men as a requirement outside of the major requirement and substitute a three hour course required of all major men "Introduction to Physical Education."
- 6. Changing the title of course 40 to one which more nearly implies the teaching of health.
- 7. The last alternative would be to accept #1 (Student Health Course) as a substitute for #30 and #63 as a requirement outside of the major and offer an introductory or orientation course first semester for men or move History and Principles to first semester instead of Personal Health, #30.

MOTE:

It will be noted that no suggestions are made herein regarding course A254 (School Hygiene), which is not a physical education offering, but it is felt that the Student Health course will in no way meet the needs of that course.
