

April with a 1st lieutenant's commission.
It seems like a long time but the
Army will see to it that they keep us
busy.

We finished our study of machine guns
and pistols today. Tomorrow we have our
final over 55 American and British
planes for identification. We still are
taking physics, code, and naval forces.
Next week will take chemical warfare,
first aid, and range firing.

This field is also used for advanced
pilot training. Planes are roaring
overhead constantly. Our barracks is
just a block away from the runways.

I imagine the campus is looking
more military with each passing day.
With these new Navy men coming to the
campus will that help the athletic
situation any?

Evans seems to be quite happy at
Miami Beach in his NCO work but is
still trying to get into OCS. I hope
he makes it for if anyone deserves
the chance it's Ray.

Thanks again for the hooklet and tell
your wife and Mrs. Hulteen hello.

As ever
Chuck
