

May 23, 1959.

Dean E. B. Stouffer,
The Graduate School,
University of Kansas.

Dear Dean Stouffer:

Following our conversation the other day concerning the prerequisites for the combined Master's degree in Education and Physical Education, I had a conference with Dr. Eibel and Miss Hoover this morning.

The thing that held us back on the requirement of ten hours of animal biology (including anatomy and physiology) was the fact that we were unable to get the anatomy course during the summer session.

We would be very happy to have you use your good offices in making it possible for our people who expect to do the greater part of their work for the Master's degree in the summer sessions to take Human Anatomy in the summer. I hope that such an arrangement might be made for next summer.

Assuring you of our desire to do everything possible to strengthen our course, I am

Sincerely yours,

Director of Physical Education,
Varsity Basketball Coach.
