

THE WORLD'S LARGEST FLEET OF STREAMLINED TRAINS

The thing that caused me to conceive the game of Goal-Hi was watching the youngsters use the 6 by 8 backboards in the playgrounds and in back yards. These backboards after a few years would decay and become a real threat to the life and safety of the children.

Then I observed that these little youngsters spent most of their time shuttling back and forth from goal to goal, wearing themselves out. Then I thought, Why not have a goal adjustable to height - 8 ft, 9 ft, 10 ft. If we had a circular court that would provide the ball handling and pivoting and passing and shooting without all the shuttling back and forth. He would develop all the skills to a high degree in this circular court.
