

KINESIOLOGY EXAM

DATE _____ NAME _____

I. Give the general location and specific action of each of the following muscles:

- a- Trapezius
- b- Biceps Brachii
- c- Hamstring group

II. Give the general location and action of five of the following:

- | | |
|---------------------|-----------------------|
| a- Latissimus dorsi | e- Quadratus Lumborum |
| b- Levator Scapulae | f- Scalene |
| c- Triceps brachii | g- Rectus Abdominis |
| d- Brachioradialis | h- Pectoralis Major |
| i- Levator costorum | |

III. What are the movements of the: (a) shoulder joint;
(b) hip joint?

IV. Define:

- (a) Flexion
- (b) Extension

V. (a) Define "tonis"
(b) At what point in body is stimulus for muscular tonis supposed to arise?

VI. Define:

- | | |
|---------------|---------------------------|
| a- Epimysium | c- Viscosity |
| b- Perimysium | d- Tetanus (two meanings) |
| e- Fasciculi | |

<u>Trapezius</u>	Sup Cr. Line of Bone P. Oc Protub. L. N. Spinous Proc. 7 th cer 1 ² Thoracis	Clav & Sp. of Scap	11 th Cr 3 & 4 Cer	Draws Head Backward Shoulder
<u>Latisimus Dorsi</u>	Crest of Ilium 3 or 4 lower ribs Gluteus Dorsal Lumbar & Sacral Vertebræ	Bicipital Gro. Long of Humerus. Subscapular		Draws the arm backward & down ward & rotates it inward
<u>Deltoid</u> (Teres minor)	Clavicle Acromian Proc. and spine scapula	Shaft of humerus. Circumflex (axillary)		Abducts and rotates humerus
<u>Teres Minor</u>	At. Border of Scapula	Gr. Tub. Humerus ant Facet?	Circumflex	Rotates humerus outward & abducts it
<u>Teres Major</u>	Inf Angle of Scap -	Inner lip Bicipital Gr. of humerus.	Subscapular	Draws the arm down & back
<u>Supraspinatus</u>	Supraspinous Fossa	Gr. Tuber. Humerus.	Suprascapular	Supports the shoulder joint Raises the arm
<u>Subscapular</u>	Ventral surface of Scapula	Lesser Tub. of Humerus.	Subscapular	Rotates head of the humerus inward
<u>Infra spinatus</u>	Inf Spin - Fossa	Gr. Tub of Humerus.	Suprascapular	Rotates the humer outward
<u>Rhomboideus</u> <u>Minor</u>	Sp's. of 7 th & 1 st Thor	Root of the spine of the scapula	5 th cer.	Retracts & elevates the scapula
<u>Rhomboideus</u> <u>Major</u>	Spines of the 5 upper Dor or Thor. Ver.	Root of the spine Scap.	5 th Cer.	Retracts & elevates the scapula
<u>Biceps</u> <u>Brachii</u>	Long Glenoid Cor. Short Cor. Proc.	Tub of Rad Deep Fascia Fore arm	Musculo- cutaneous	Flexes & supinates the forearm -
<u>Triceps 3 heads</u> <u>Tri. Brachialis</u>	Ext. & Int near musculo- spiral groz. Shaft of humerus middle or long - Lower margin of glenoid cavity	olecranon process of the ulna -	(Musculo spiral Radial)	Extends the forearm

Pec. Major	Clav. Sternum & costal cartilages	Ext. Border Biceps. Gracilis	Ant Thor Ext & Internal	Draws the arm down & forward
Pec. Minor	3rd Coracoid Proc. 3 4 & 5 ribs	Coracoid Proc.	Ant Thor.	Depresses the point of the shoulder
Serratus Magnus	Upper 8 Ribs	Neutral Margin Vertebral border of scapula	Post. Thor.	Elevates the ribs in inspiration
Serratus Post. Inf.	Spines of last 2 dorsal and first 3 lumbar	4 lower ribs	10 th & 11 th intercostal	Depresses the ribs in expiration
Ser. Post Superior	Spines of 2 nd , 3 rd 4 th 5 th Ribs Sp of 7 th Cerv and 2 upper dorsals	2, 3, 4 and 5 th Ribs	Post Br of the Cervical	Raises the ribs in inspiration
Rectus abdominis	Pubic Crest.	Cartilages of the 5 th to 7 th Ribs	Intercostal ilio-hypogastric ilioinguinal	Compresses the viscera and flexes the thorax
Multifidus Spinatus	Sacrum iliac spine artic proc. of lumbar & ces ver. & trans proc. of dorsal & 7 th Cerv.	Laminae & spines from last lumbar to 2 nd Cerv Ver.	Post Spine Branches	Erects & Rotates the spinal column.
Erector Spinae (Sacro spinalis)	Iliac Crest Back of Sacrum lumbar & 3 lower dorsal spines	Divides into the sacro-lumbalis and longissimus dorsi & spinalis dorsi	Lumbar Nerves Post Div.	Extension of spinal column on pelvis Rotation
Iliacus	Iliac crest fossa, Crest, base of The sacrum	Lesser Trochanter	Anterior Crural	Flexes & rotates the femur outward
Pronator Supinator		Flexor, Extensor		

DR. F.C. ALLEN

MOVEMENTS OF THE ANKLE JOINT AND THE MUSCLES
PRODUCING THESE ACTIONS

MOVEMENTS OF THE KNEE JOINT

MUSCULATURE OF THE HIP AND THIGH

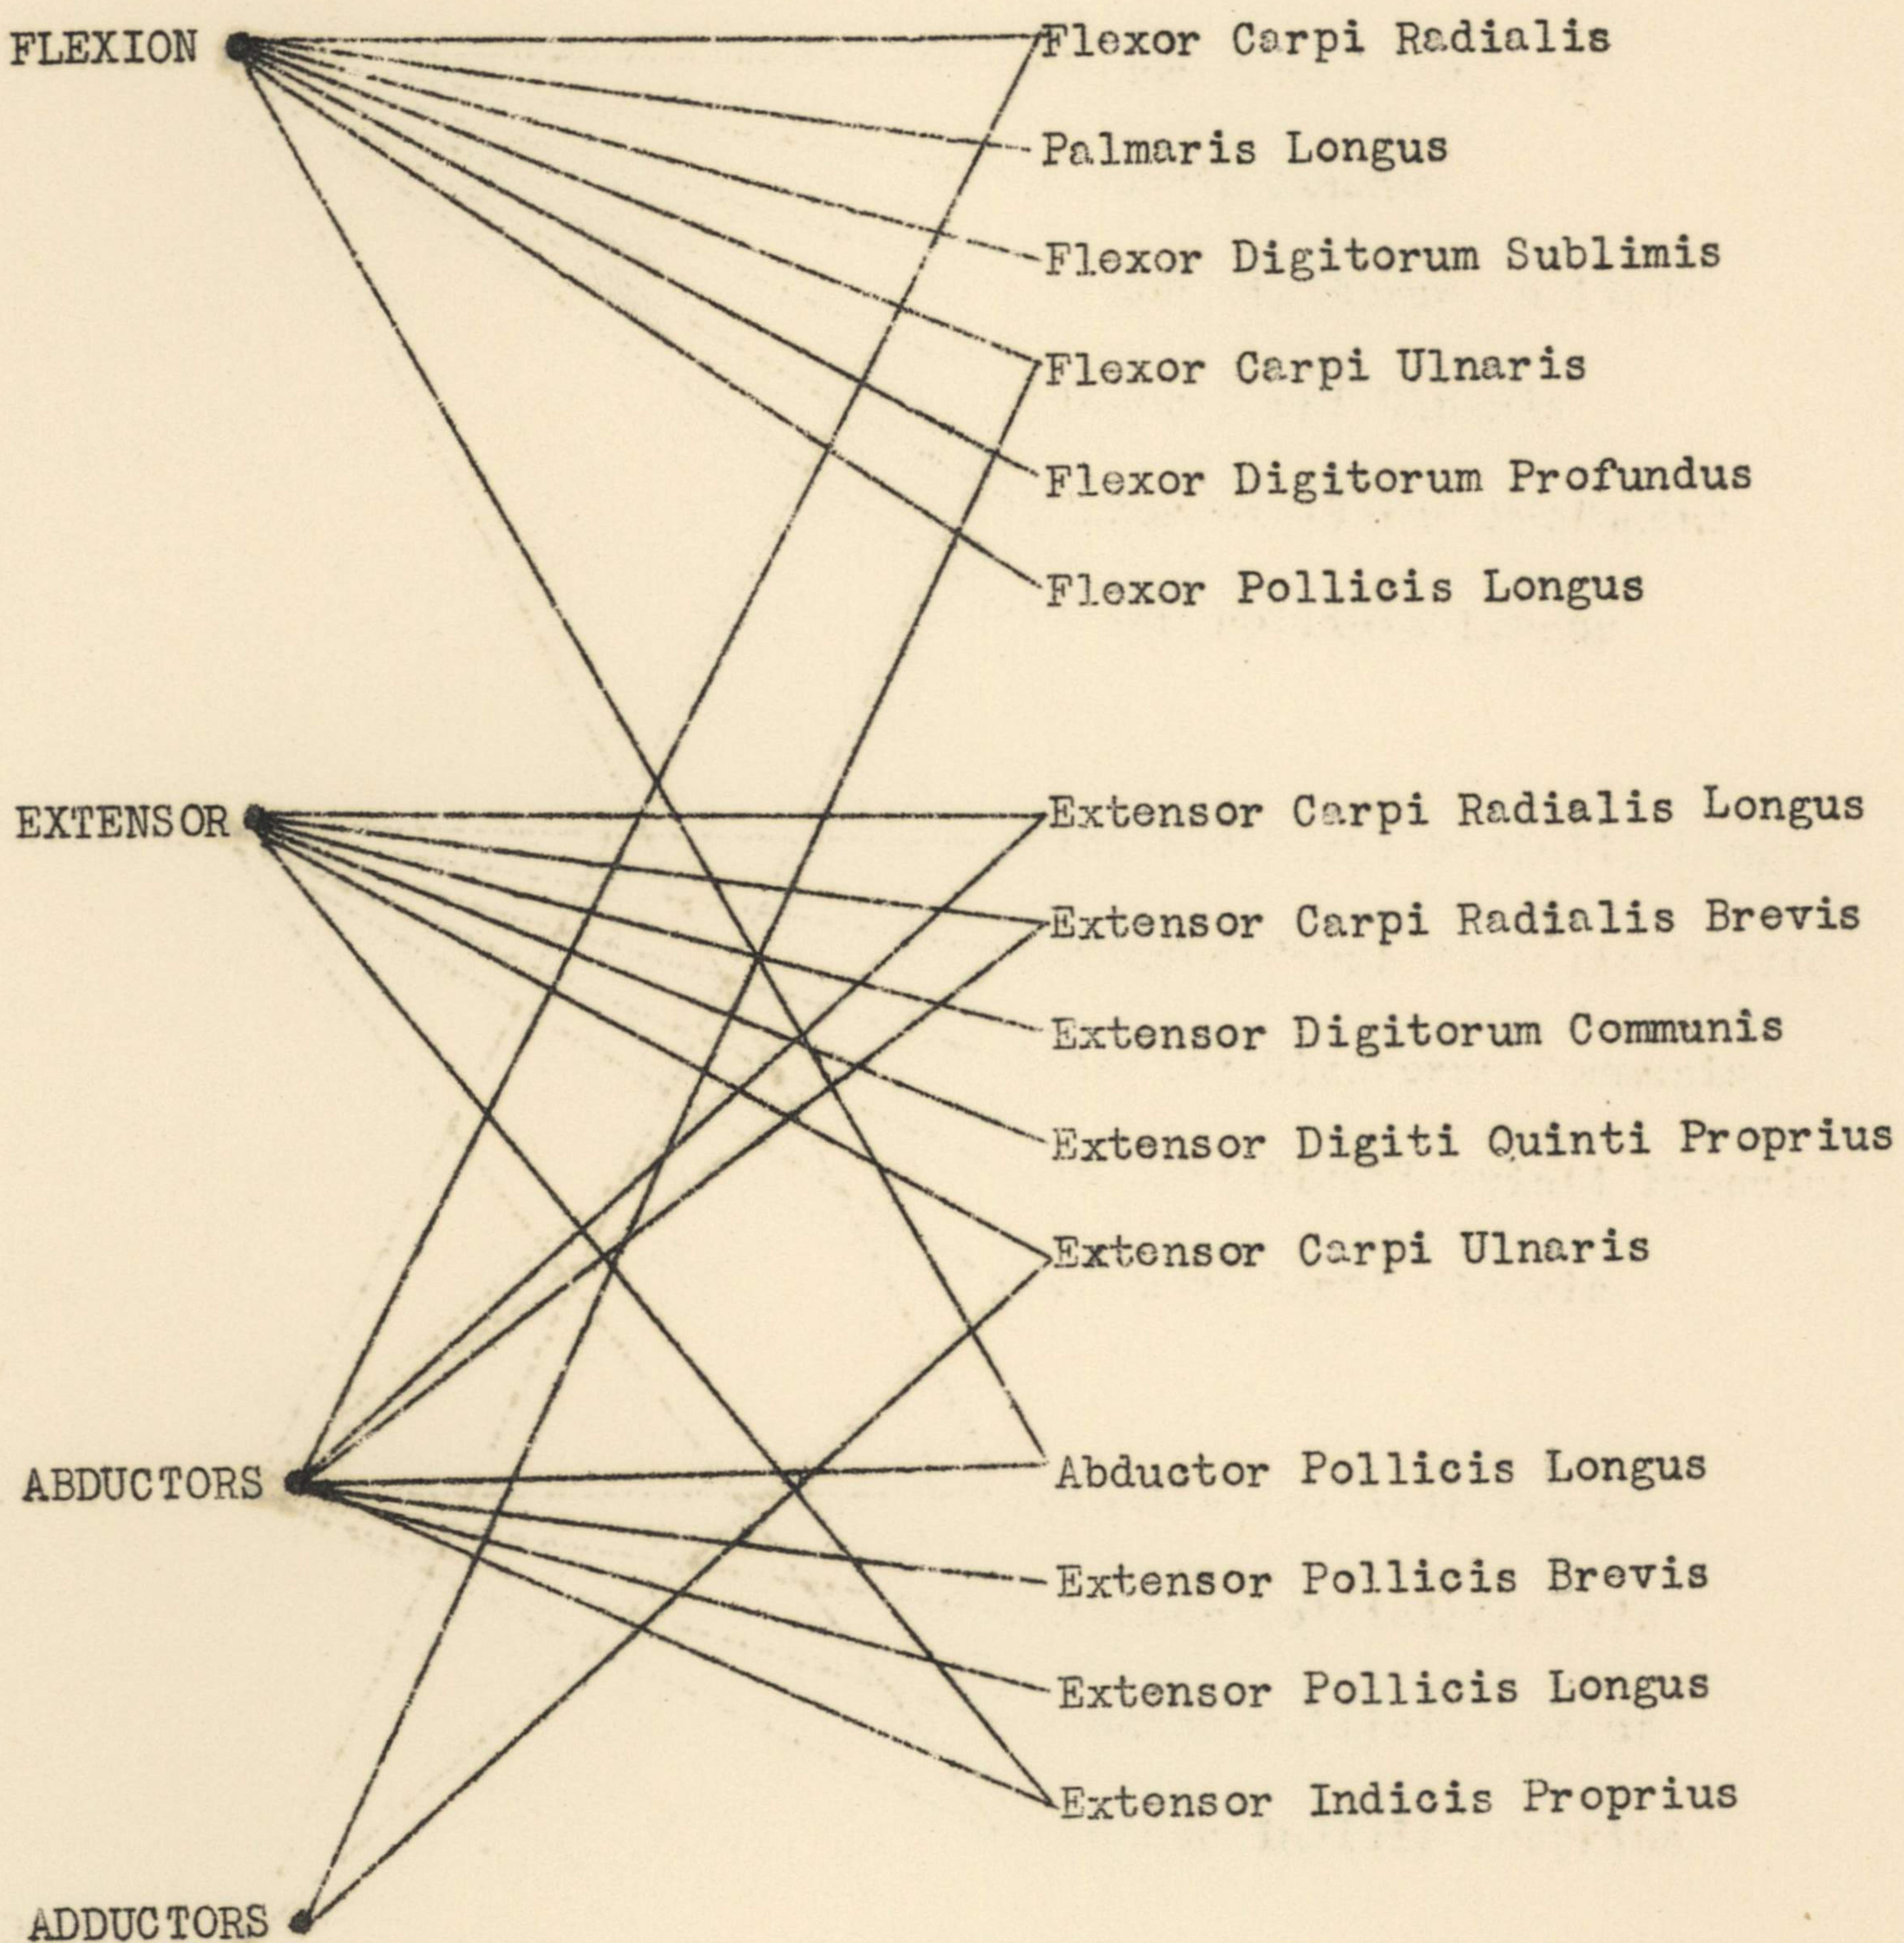

MOVEMENTS OF THE ELBOW JOINT AND THE MUSCLES

PRODUCING THESE ACTIONS

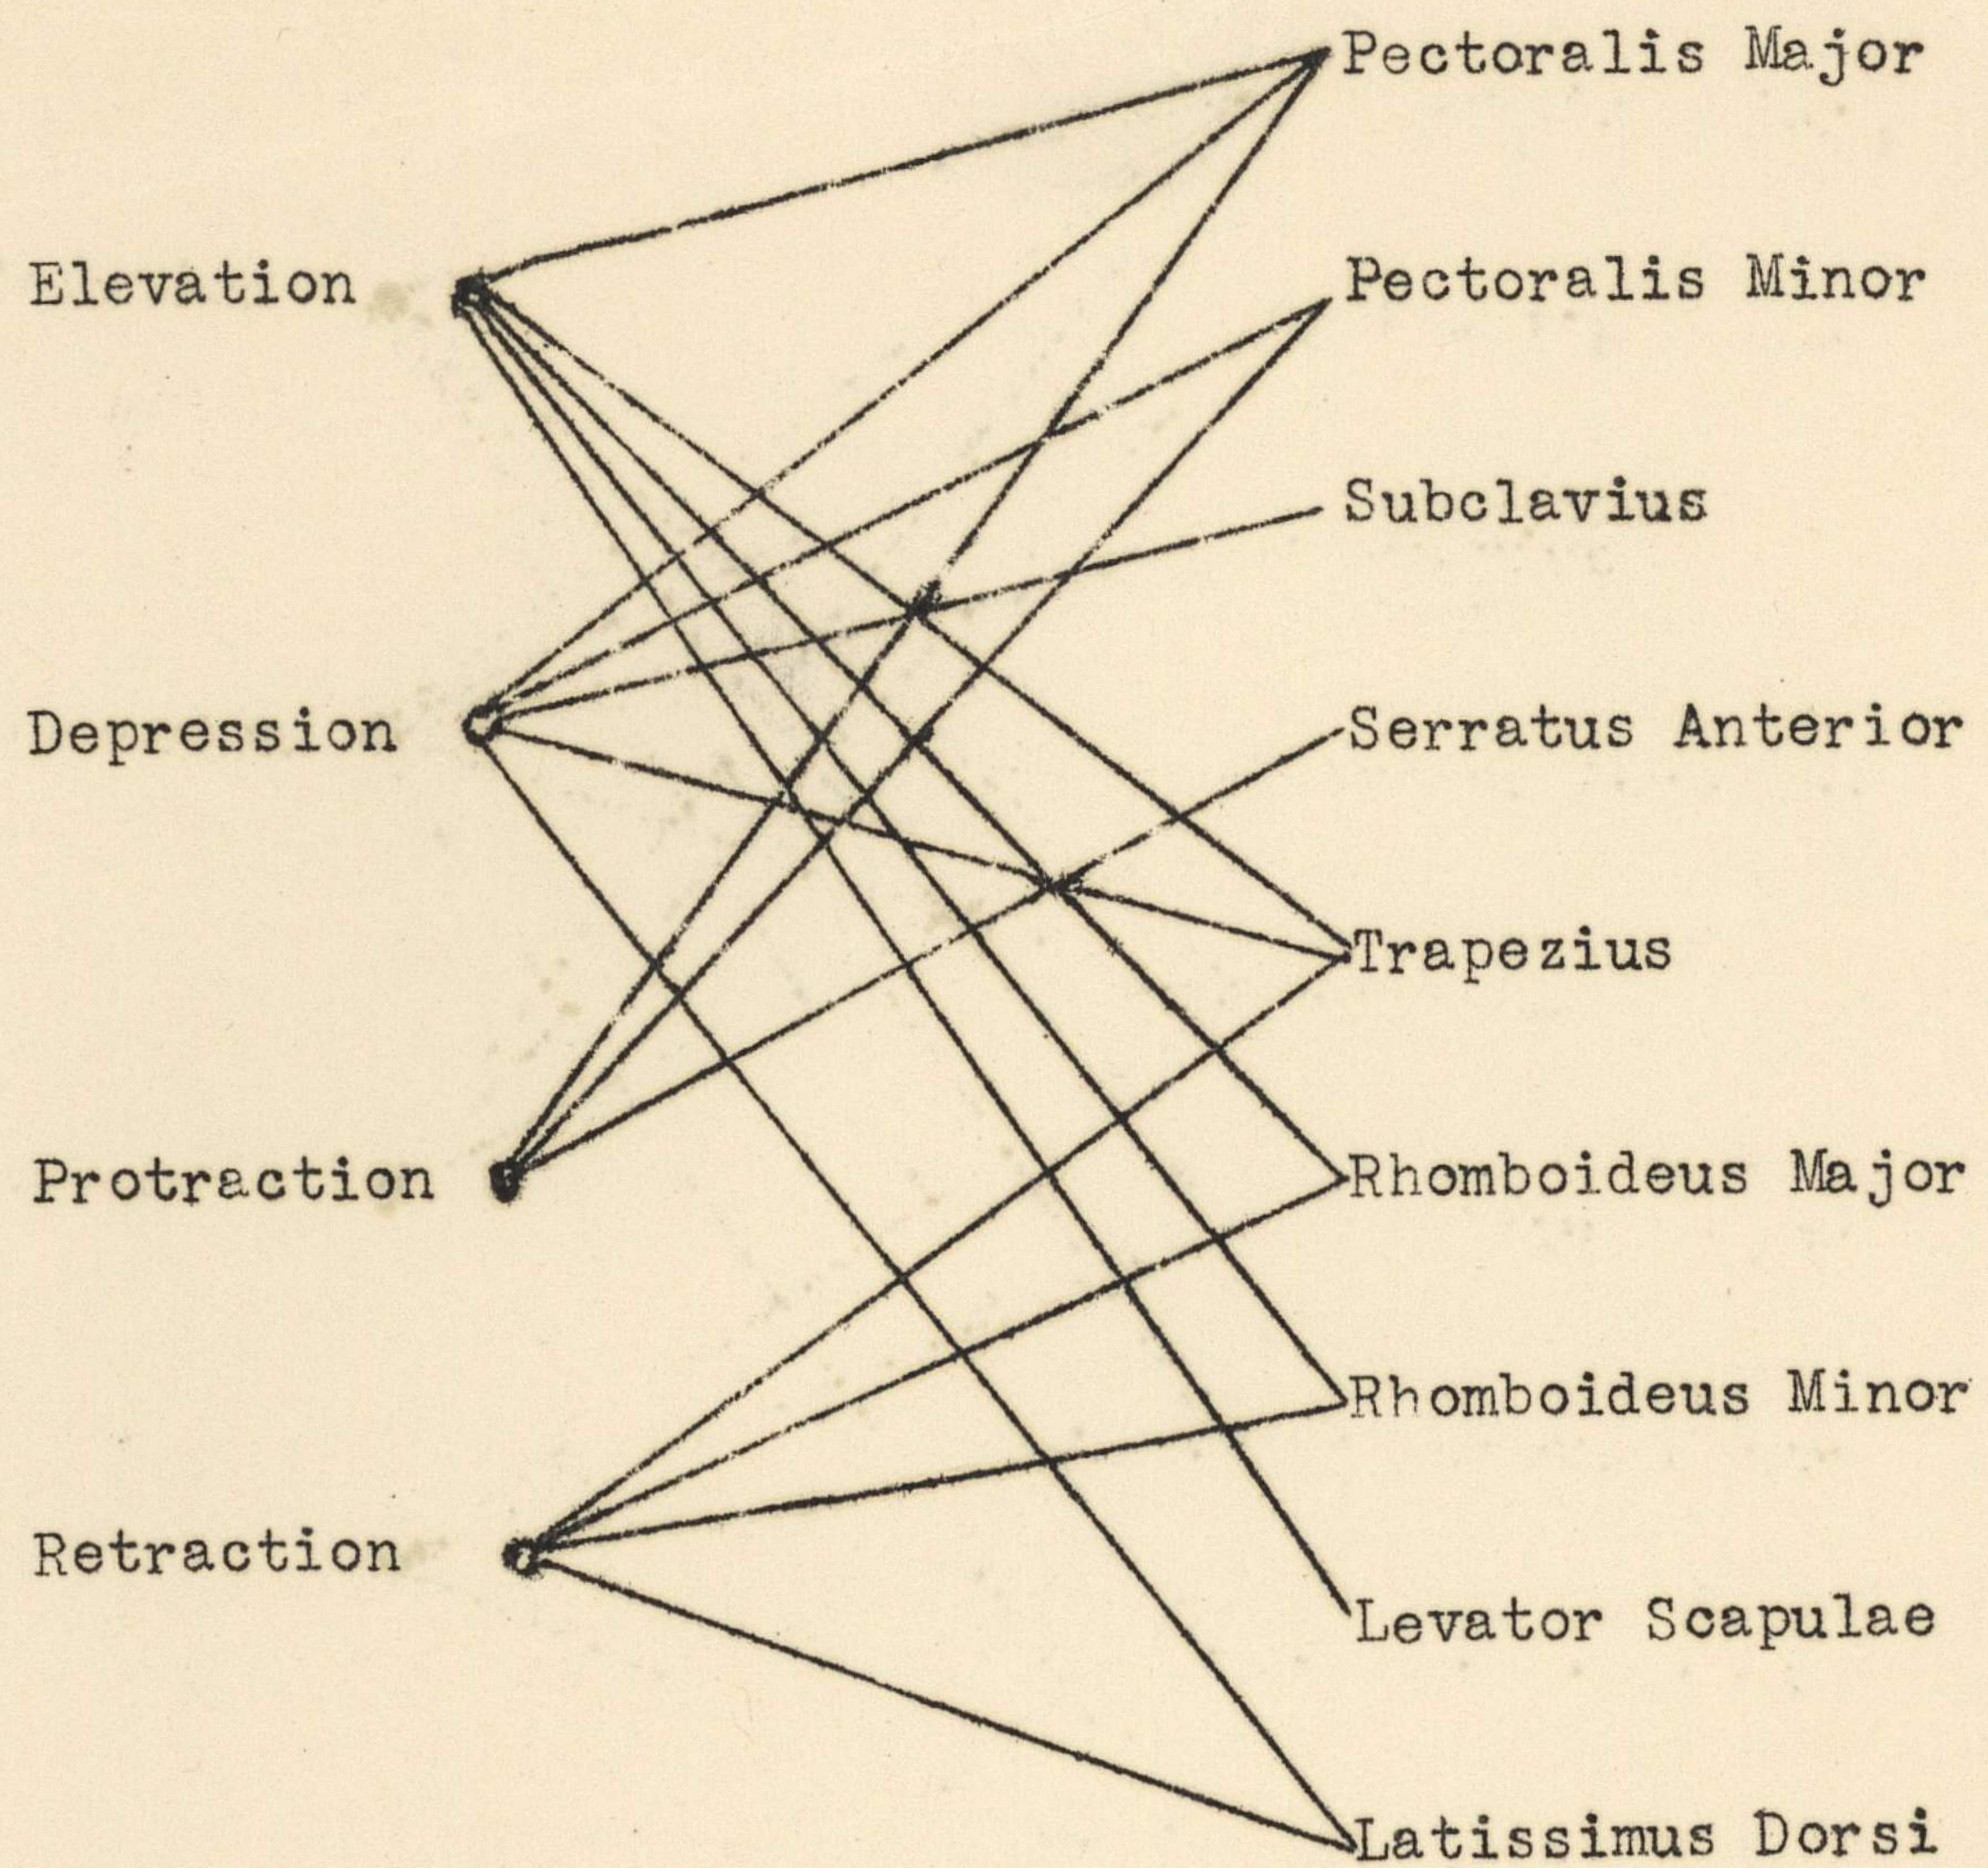

MOVEMENTS OF THE WRIST JOINT AND THE MUSCLES

PRODUCING THESE ACTIONS

MUSCLES OF THE SHOULDER-GIRDLE

MOVEMENTS OF THE SHOULDER GIRDLE

Forward - Protraction

Backward - Retraction

Upward - Elevation

Downward - Depression

Combinations - Rotation

The shoulder is an enarthrodial (Ball and Socket) joint. The articulation is formed by the head of the humerus and the glenoid fossa.

LIGAMENTS OF THE SHOULDER JOINT

Capsular	Gleno-Humeral	Coraco-Humeral	Transverse-
Humeral and the Glenoid			

KINESIOLOGY

1. Define the following:
(a) Anatomy (e) Osteology
(b) Physiology (f) Neurology
(c) Kinesiology (g) Myology
(d) Syndesmology (h) Histology
2. What is a cell? What is the difference between a cell, an organ, and a system?
3. Discuss what is meant by an exciting cause and a predisposing cause and give an example illustrating each.
4. What is meant by abduction and adduction in physical education? What is the difference between rotation and circumduction?
5. What is a "charley horse"? Explain the kinesiological relationship between extension and flexion, and a "charley horse."
6. List and describe three types of muscle tissue. Give examples of each.
7. Draw a diagram of a muscle cell and label sarcolemma, sarcoplasm, sarcomeres, sarcostyles and myo-neural junction.
8. A typical skeletal muscle consists of:
(a) _____ (c) _____
(b) _____ (d) _____
9. What is the approximate chemical composition of a muscle? What is a "property?" Give the properties of muscle tissue.
10. Name a muscle or ligament that derives its name from:
(a) Location (d) Structure
(b) Points of attachment (e) Direction
(c) Shape (f) Function
11. Explain the difference between: Give examples of each.
(a) prime movers
(b) antagonists
(c) fixation muscles
12. Draw a diagram of a motor neurone and label dendrites, nerve cell, nucleus, axis cylinder, neurilemma, medullary sheath, and terminal branch.
13. Give the function of
(a) nerve cell and its nucleus
(b) axis cylinder
(c) Neurilemma
(d) dendrites
14. What is a lever? What is the relationship between levers and kinesiology?
15. What is a synovitis? What is a symphesis? Joints are classified as:
(a) _____
(b) _____
(c) _____
16. What is the difference between cranial and spinal nerves? Name the 12 pairs of cranial nerves. Name the 31 pairs of spinal nerves. Name the sympathetic nerves.
17. What muscles are called the hamstrings, and why are they important?
18. In punting a football
(a) What muscles of the limb are employed?
(b) How do these muscles act on the pelvis?
19. What muscles effect flexion and extension of the knee?
20. What is the work of the following muscles in relation to the movement of the ankle joint:
(a) tibialis anterior
(b) Plantaris
(c) gastrocnemius

21. Give three (3) ways in which the tensor fascia lata affects movement.
22. Describe the general movements of the shoulder girdle; the kind of joint; and the ligaments involved in the shoulder joint.
23. What muscles of elbow joint produce supination and extension? What is the difference between supination and pronation? Name the pronators and flexors.
24. What nerves are involved in the reflex arc.
25. The instructor tells the student in their minds eye to lick their tongue over a lemon. What action takes place over the nervous system?
