

A VACATION OPPORTUNITY FOR WOMEN.

Last summer many girls and mature women earned good pay, had fine eats and healthful exercise out under the clear skies of "The Greatest Wheat Country in the World". Very many proved that in driving trucks and tractors and even in slide scooping they are the equal of most men. While many helped in cooking to enable the farm women to enter the fields, multitudes got some training for some of the above lines of work and earned from \$4.00 to \$6.00 per day all season. In scooping the wages run from \$5.00 to \$8.00. This year due to the greatly increased scarcity of help, the wages probably be the highest ever known.

The principal need is for reasonable training and practical experience. Many a willing worker can double her wages simply by securing some "know-how" and a little exercise and practice in actual work.

Letters recently received from friends at several places on the High Plains indicate that the on-coming wheat crop promises to equal and possibly to excel that of last year.

Few ways can now be found to save the lives of many of our fighting men than by providing bread for starving millions who can become the allies of our military forces in Europe and China.

It is suggested that volunteers be enrolled to take two or three periods of vigorous physical exercises until the close of the present semester, to be followed by at least two weeks of daily instruction and actual practice in scooping wheat and/or in driving tractors and trucks.

It has been learned that the means for providing both the machines and competent and experienced instructors can be arranged; and that jobs readily can be secured by all who have made satisfactory preparation.
