

UNIVERSITY OF KANSAS
LAWRENCE

DIVISION OF PHYSICAL EDUCATION AND
INTERCOLLEGIATE ATHLETICS

Sunday afternoon

Dear Doc:

Had a long talk with Kistler. His is the boy that you had in mind. He is ~~much~~ interested, or rather will be interested if the proposition which they have before the president here does not go thru. The new plan for him would net a total of thirty six hundred for the year including work in the regular session and during the summer. To me, his position here would not appear to be a very interesting one since they will have his attentions divided from coaching freshmen teams in three sports to continuing his charge of practice teaching in the Experimental School to teaching theory courses in Physical Education and directing of Graduate Theses and a few other things. He would keep the job here and be perfectly happy, though he may work himself to death. He is none too optimistic regarding the possibility of the president passing upon the new arrangement but McCloy thinks there is no doubt but that it will go thru. He will know in a couple of days. McCloy was very outspoken relative to the possibility of ^{Not} securing a man of Kistler's experience and qualifications at the salary that we have to offer. In fact he feels that we are going to ^{HAVE TO} sacrifice experience to a certain extent to get a man with the advanced degree. I am beginning to think that a PhD in Physical Education would demand a pretty good salary in most schools.

As I mentioned in the night letter to you Dr. McCloy indicated as his second choice, Vernon Lapp, who wrote you very early in the game from Kansas City where he is employed. He has had five years experience in all. In the five years ought to have a pretty good idea as to the public school situation. He has been making a special study of the work in the past three years in Kansas City. In his previous position he taught all of the Physical Ed. (girls and boys) in a town of two thousand in Wisconsin. ^{2 yrs} He comes from a long line of University people. His father is on't he faculty at the University of Michigan and his brother is in the Physics Department here. He came out here to see me last night. He and his wife are stopping a couple of days en-route to a small town in Wisconsin where they will spend a good part of the summer. Lapp is a very large chap-not
